Nature Study And Science:

Teaching Children Science Sally Gregory Kohlstedt, 2010-05-15 In the early twentieth century a curriculum known as nature study flourished in major city school systems streetcar suburbs small towns and even rural one room schools This object based approach to learning about the natural world marked the first systematic attempt to introduce science into elementary education and it came at a time when institutions such as zoos botanical gardens natural history museums and national parks were promoting the idea that direct knowledge of nature would benefit an increasingly urban and industrial nation The definitive history of this once pervasive nature study movement Teaching Children Science emphasizes the scientific pedagogical and social incentives that encouraged primarily women teachers to explore nature in and beyond their classrooms Sally Gregory Kohlstedt brings to vivid life the instructors and reformers who advanced nature study through on campus schools summer programs textbooks and public speaking Within a generation this highly successful hands on approach migrated beyond public schools into summer camps afterschool activities and the scouting movement Although the rich diversity of nature study classes eventually lost ground to increasingly standardized curricula Kohlstedt locates its legacy in the living plants and animals in classrooms and environmental field trips that remain central parts of science education today

Nature Study and Science Gilbert H. Trafton, 2015-06-24 Excerpt from Nature Study and Science The increasing importance of science in modern life is naturally compelling the study of more science in our schools For a number of years considerable attention has been paid to science in the high schools In recent years general science has found its way quite universally into the junior high school where it is taught chiefly in the last year the ninth grade There are indications here and there that eventually it will be spread out over the seventh and eighth grades also and made into a three year course The next logical step will be the introduction of more science into the intermediate grades which feel above them the stimulation of the general science work being done in the junior high school and below them the urge of the nature study work being done in the primary grades The intermediate grades must bridge the gap between these two extremes by working out a course that will contain elements from both movements harmonize them and advance the child from the simple nature study interest to the interest in useful and applied scientific knowledge In past years the tendency in the intermediate grades has been to emphasize too much the study of the plants and animals and to neglect the physical sciences About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
