Everyday Nature: Knowledge of the Natural World in Colonial New York ,2007 In *Everyday Nature* Sara Gronim shows how scientific advances were received in the early modern world from the time Europeans settled in America until just before the American Revolution Settlers approached a wide range of innovations such as smallpox inoculation maps and surveys Copernican cosmology and Ben Franklin s experiments with electricity with great skepticism New Yorkers in particular were distrustful because of the chronic political and religious factionalism in the colony Those discoveries that could be easily reconciled with existing beliefs about healing the sick agricultural practices and the revolution of the planets were more readily embraced

Hegel and Heidegger on Nature and World Raoni Padui,2023-04-24 The philosophical concepts of nature and world have overlapped one another in a myriad of ways throughout the history of Western philosophy Nevertheless modernity has constructed a decisive philosophical dichotomy between the domain of nature and the domain of the human world as a response to the revolutions of the natural sciences in the seventeenth century In *Hegel and Heidegger on Nature and World* Raoni Padui investigates the responses to this distinction between nature and world in the works of Hegel and Heidegger Both philosophers attempt to heal the wounds of modernity and to reconcile the human historical world to the domain of nature and both refuse to accept the dichotomy between nature and world seeking to offer a way in which humans can inhabit a meaningful world without being alienated from the nature that conditions it However the difference in their modes of reconciliation illustrates the options opened up by modern philosophy either a Hegelian path of self determination that traces our historical emancipation from the natural domain or a Heideggerian rethinking of nature that seeks a renewed proximity to the domain of things
