**NATURE, SOURCE, MEASUREMENT, AND EVALUATION
OF MUSIC APTITUDES***

Edwin E. Gordon

University of South Carolina, USA

Summary. The article points at the differences between music achievements and music aptitudes claiming that music achievements are intellectual, while music aptitudes are spontaneous and occur in the entire body. The author also shows the importance of testing the music aptitude and presents tests useful for this purpose (e.g. PMMA, IMMA, MAP and AMMA). He says that music aptitude tests may be used to identify students with high overall music aptitude, but they may also be administered to focus on tonal and rhythm aptitudes.

We are born with equal rights under the law, but that is not to say we are born equal. Every unborn child has the potential to become a child, but once born, differences among children become readily apparent. One such difference lies among children in their potential to learn and understand music. Nonetheless, they share the same right to achieve whatever they are capable of in music.

More than two thousand years ago, Plato said there is nothing more devastating and unequal than equal treatment of students with unequal aptitudes. More recently, Felix Emanuel Schelling (1858-1945), American educator and scholar, had this to say: "True education makes for inequality; the inequality of individuality, the inequality of success; the glorious inequality of talent, of genius; for inequality, not mediocrity, individual superiority, not standardization, is the measure of the progress of the world".

The Science and Psychology of Music Performance Richard Parncutt, Gary McPherson, 2002-04-18. What type of practice makes a musician perfect? What sort of child is most likely to succeed on a musical instrument? What practice strategies yield the fastest improvement in skills such as sight reading, memorization and intonation? Scientific and psychological research can offer answers to these and other questions that musicians face every day. In *The Science and Psychology of Music Performance*, Richard Parncutt and Gary McPherson assemble relevant current research findings and make them accessible to musicians and music educators. This book describes new approaches to teaching music, learning music and making music at all educational and skill levels. Each chapter represents the collaboration between a music researcher (usually a music psychologist) and a performer or music educator. This combination of expertise results in excellent practical advice. Readers will learn, for example, that they are in the majority (57%) if they experience rapid heartbeat before performances; the chapter devoted to performance anxiety will help them decide whether beta blocker medication, hypnotherapy or the Alexander Technique of relaxation might alleviate their stage fright. Another chapter outlines a step by step method for introducing children to musical notation, firmly based on research in cognitive development. Altogether the 21 chapters cover the personal, environmental and acoustical influences that shape the learning and performance of music.
