Nature Of Future Conflict:

The Nature of Future Conflict Richard Connaughton, 1995-09-11 Whilst the collapse of the Soviet Union and with it the associated Warsaw Pact has greatly reduced the threat of a major conflict with Europe the story of the involvement of the United Nations in so called peace operations over the past six years makes it abundantly clear that the world wide incidence of low intensity intra state conflict will remain for us as far ahead as we can see and that the resources and procedures which are essential for the success of future UN operations are yet to be produced Richard Connaughton has already published a philosophical treatise entitled *Military Intervention in the 1990s A New Logic of War* in which he validated the nine principles emerging from a study of the conduct of military interventions between 1918 and 1990 against lessons emerging from the Gulf War of 1990 91 A subsequent quadripartite conference held at the British Army Staff College found that those principles applied equally to an intra state conflict such as the former Yugoslavia In this forthright and highly professional study drawing upon those principles Richard Connaughton seeks to examine the nature of future conflict and knowledge for the benefit of those called upon to make real time decisions He pulls no punches leaving the reader with a very clear understanding of the defects of our present international machinery of the maintenance of peace He emphasises the pressing need for a new free range study of the UN in its 50th year to establish not only the comprehensive reforms to its organisation and procedures that are so badly needed but also a clear statement of what is required of the organisation's membership as the providers of those resources without which success is unobtainable

The Nature of Future Conflict Richard Connaughton, 1995-09-11 Whilst the collapse of the Soviet Union and with it the associated Warsaw Pact has greatly reduced the threat of a major conflict with Europe the story of the involvement of the United Nations in so called peace operations over the past six years makes it abundantly clear that the world wide incidence of low intensity intra state conflict will remain for us as far ahead as we can see and that the resources and procedures which are essential for the success of future UN operations are yet to be produced Richard Connaughton has already published a philosophical treatise entitled *Military Intervention in the 1990s A New Logic of War* in which he validated the nine principles emerging from a study of the conduct of military interventions between 1918 and 1990

against lessons emerging from the Gulf War of 1990-91. A subsequent quadripartite conference held at the British Army Staff College found that those principles applied equally to an intra-state conflict such as the former Yugoslavia. In this forthright and highly professional study drawing upon those principles, Richard Connaughton seeks to examine the nature of future conflict and knowledge for the benefit of those called upon to make real-time decisions. He pulls no punches, leaving the reader with a very clear understanding of the defects of our present international machinery of the maintenance of peace. He emphasises the pressing need for a new free-range study of the UN in its 50th year to establish not only the comprehensive reforms to its organisation and procedures that are so badly needed but also a clear statement of what is required of the organisation's membership as the providers of those resources without which success is unobtainable.

The Changing Nature of Warfare, the Factors Mediating Future Conflict, and Implications for Special Operations Forces Joint Special Operations University, John B. Alexander, 2014-11-29. This book challenges the prevailing sentiment regarding the nature of war. Designed to generate discussion on topics where little or none has been acceptable, it pushes the envelope of traditional political and military science thinking. It argues that the nature of war has changed at a fundamental level that of definition. Further, information technology is so pervasive and interpenetrating that its impact cannot be relegated to mere alteration in the techniques by which war is prosecuted. Rather, information technology facilitates new social structures, exacerbates competing hierarchical beliefs, and combined with other factors, enhances the ability of powerful nations or other philosophical organizations to impose their will on adversaries. It is this ability for imposition of will, not the level of violence inflicted, that will determine whether or not a conflict has been won or lost. Other sacred cows are gored in this book by stating: 'The nation-state is a failing concept with limited utility and great liability. Boundaries, once thought to be absolute, are in reality arbitrary. Ideology, not materialism, motivates many people, and therefore sources of conflict and terrorism cannot be eliminated solely by reducing poverty. Personal allegiance will no longer be assured. Violence, while it will remain prominent, will be optional in future conflicts.'

Knowledge and Speed, 1998. **Nurture Your Nature for a Better Future** Jayaraj Dakshinamoorthy, 2016-10-18. What does one want? If this simple question can be answered clearly, half the battle is won. A lack of understanding of the question will bring forth answers that lead to further questions. In all our activities, if we know the why of it, the how of it would be a lot easier. Involvement, not imposition; inclination, not inducement; selection, not seduction, are the key ingredients to get things right.

There are plenty of perspectives but a lack of clarity comes along with it Is it possible to enjoy disappointments Read to find out Decision making risk taking and being at crossroads are some of life challenges that need to be faced squarely confidently and substantively Why do we miss the obvious Is it because we are oblivious to what is happening around us If all our efforts address the core question of what we really want we shall have taken the bull of perpetual dissatisfaction by its horns

The Nature of War in the Information Age David J. Lonsdale, 2004-06-01 There has been a great deal of speculation recently concerning the likely impact of the Information Age on warfare In this vein much of the Revolution in Military Affairs RMA literature subscribes to the idea that the Information Age will witness a transformation in the very nature of war In this book David Lonsdale puts that notion to the test Using a range of contexts the book sets out to look at whether the classical Clausewitzian theory of the nature of war will retain its validity in this new age The analysis covers the character of the future battlespace the function of command and the much hyped concept of Strategic Information Warfare Finally the book broadens its perspective to examine the nature of Information Power and its implications for geopolitics Through an assessment of both historical and contemporary case studies including the events following September 11 and the recent war in Iraq the author concludes that although the future will see many changes to the conduct of warfare the nature of war as given theoretical form by Clausewitz will remain essentially unchanged
