**Nature's Experiments and the Search for Symbolist Form** Allison Morehead, 2017-02-27. This provocative study argues that some of the most inventive artwork of the 1890s was strongly influenced by the methods of experimental science and ultimately foreshadowed twentieth-century modernist practices. Looking at avant-garde figures such as Maurice Denis, Douard Vuillard, August Strindberg, and Edvard Munch, Allison Morehead considers the conjunction of art-making and experimentalism to illuminate how artists echoed the spirit of an increasingly explorative scientific culture in their work and processes. She shows how the concept of nature's experiments—the belief that the study of pathologies led to an understanding of scientific truths—above all about the human mind and body—extended from the scientific realm into the world of art, underpinning artists' solutions to the problem of symbolist form and providing a ready-made methodology for fin-de-siècle truth-seekers. By using experimental methods to transform symbolist theories into visual form, these artists broke from naturalist modes and interrogated concepts such as deformation, automatism, the arabesque, and madness to create modern works that were radically and usefully strange. Focusing on the scientific, psychological, and experimental tactics of symbolism, *Nature's Experiments and the Search for Symbolist Form* demystifies the avant-garde value of experimentation and reveals new and important insights into a foundational period for the development of European modernism.

**The Storied Nature of Human Life** Karl E. Scheibe, Frank J. Barrett, 2017-10-23. This book sheds new light on the life and the influence of one of the most significant critical thinkers in psychology of the last century, Theodore R. Sarbin (1911–2005). In the first section, authors provide a comprehensive account of Sarbin's life and career. The second section consists in a collection of ten publications from the last two decades of his career. The essays cover topics such as the adoption of contextualism as the appropriate world view for psychology, the establishment of narrative psychology as a major mode of inquiry, and the rejection of both mechanism and mentalism as suitable approaches for psychology. The book is historically informed and yet focused on the future of psychological theory and practice. It will engage researchers and scholars in psychology, social scientists, and philosophers, as well as general readership interested in exploring Sarbin's theories.
