Natural Disasters, Cultural Responses Christof Mauch, Christian Pfister, 2009-03-16 Catastrophes it seems are becoming more frequent in the twenty first century According to UN statistics every year approximately two hundred million people are directly affected by natural disasters seven times the number of people who are affected by war Discussions about global warming and fatal disasters such as Katrina and the Tsunami of 2004 have heightened our awareness of natural disasters and of their impact on both local and global communities Hollywood has also produced numerous disaster movies in recent years some of which have become blockbusters This volume demonstrates that natural catastrophes earthquakes hurricanes floods etc _have exercised a vast impact on humans throughout history and in almost every part of the world It argues that human attitudes toward catastrophes have changed over time Surprisingly this has not necessarily led to a reduction of exposure or risk The organization of the book resembles a journey around the globe _from Europe to North Africa the Middle East and Asia and from the Pacific through South America and Mexico to the United States While natural disasters appear everywhere on the globe different cultures societies and nations have adopted specific styles for coping with disaster Indeed how humans deal with catastrophes depends largely on social and cultural patterns values religious belief systems political institutions and economic structures The roles that catastrophes play in society and the meanings they are given vary from one region to the next they differ _and this is one of the principal arguments of this book _from one cultural political and geographic space to the next The essays collected here help us to understand not only how people in different times throughout history have learned to cope with disaster but also how humans in different parts of the world have developed specific cultural social and technological strategies for doing so *History and Nature in the Enlightenment* Nathaniel Wolloch, 2016-04-22 The mastery of nature was viewed by eighteenth century historians as an important measure of the progress of civilization Modern scholarship has hitherto taken insufficient notice of this important idea This book discusses the topic in connection with the mainstream religious political and philosophical elements of Enlightenment culture It considers works by Edward Gibbon Voltaire Herder Vico Raynal Hume Adam Smith William Robertson and a wide range of lesser and better known figures It also discusses many classical medieval and early modern sources which influenced Enlightenment historiography as well as eighteenth century attitudes toward nature in general **Animal Horror Cinema**

Katarina Gregersdotter, Johan Höglund, Nicklas Hållén, 2016-02-22 This first full length scholarly study about animal horror cinema defines the popular subgenre and describes its origin and history in the West The chapters explore a variety of animal horror films from a number of different perspectives This is an indispensable study for students and scholars of cinema horror and animal studies

Imagining Atlantis Richard Ellis, 2012-01-11 Ever since Plato created the legend of the lost island of Atlantis it has maintained a uniquely strong grip on the human imagination For two and a half millennia the story of the city and its catastrophic downfall has inspired people from Francis Bacon to Jules Verne to Jacques Cousteau to speculate on the island's origins nature and location and sometimes even to search for its physical remains It has endured as a part of the mythology of many different cultures yet there is no indisputable evidence let alone proof that Atlantis ever existed What then accounts for its seemingly inexhaustible appeal Richard Ellis plunges into this rich topic investigating the roots of the legend and following its various manifestations into the present He begins with the story's origins Did it arise from a common prehistorical myth Was it a historical remnant of a lost city of pre Columbians or ancient Egyptians Was Atlantis an extraterrestrial colony Ellis sifts through the scientific evidence marshaled to prove these theories and describes the mystical and spiritual significance that has accrued to them over the centuries He goes on to explore the possibility that the fable of Atlantis was inspired by a conflation of the high culture of Minoan Crete with the destruction wrought on the Aegean world by the cataclysmic eruption around 1500 b c of the volcanic island of Thera or Santorini A fascinating historical and archaeological detective story *Imagining Atlantis* is a valuable addition to the literature on this essential aspect of our mythohistory

Michael Crichton, 2012-05-14 From the 1 New York Times bestselling author of *Jurassic Park* and *Timeline* comes a gripping thriller about the shocking demise of eight American geologists in the darkest region of the Congo Thrilling The New York Times Book Review Deep in the African rainforest near the ruins of the Lost City of Zinj a field expedition is brutally killed At the Houston based Earth Resources Technology Services Inc a horrified supervisor watches a gruesome video transmission of that ill fated group and sees a haunting grainy man like blur moving amongst the bodies In San Francisco an extraordinary

gorilla named Amy who has a 620 sign vocabulary may hold the secret to that fierce carnage Immediately a new expedition is sent to the Congo with Amy in tow descending into a secret forbidden world where the only escape may be through the grisliest death

Library, 1978 *Defending Illusions* Allan K. Fitzsimmons, 1999

Fitzsimmons examines the science philosophy and law of ecosystems management and shows how efforts to make federal protection of ecosystems the centerpiece of national environmental policy are driven by religious veneration of Mother Earth wrapped in a veil of weak science

Naming Nature: The Clash Between Instinct and Science Carol Kaesuk Yoon, 2009-08-24 Finalist for the 2009 Los Angeles Times Book Prize in Science and Technology the surprising untold story about the poetic and deeply human cognitive capacity to name the natural world Two hundred and fifty years ago the Swedish botanist Carl Linnaeus set out to order and name the entire living world and ended up founding a science the field of scientific classification or taxonomy Yet in spite of Linnaeus's pioneering work and the genius of those who followed him from Darwin to E O Wilson taxonomy went from being revered as one of the most significant of intellectual pursuits to being largely ignored Today taxonomy is viewed by many as an outdated field one nearly irrelevant to the rest of science and of even less interest to the rest of the world Now as Carol Kaesuk Yoon biologist and longtime science writer for the New York Times reminds us in Naming Nature taxonomy is critically important because it turns out to be much more than mere science It is also the latest incarnation of a long unrecognized human practice that has gone on across the globe in every culture in every language since before time the deeply human act of ordering and naming the living world In Naming Nature Yoon takes us on a guided tour of science's brilliant if sometimes misguided attempts to order and name the overwhelming diversity of earth's living things We follow a trail of scattered clues that reveals taxonomy's real origins in humanity's distant past Yoon's journey brings us from New Guinea tribesmen who call a giant bird a mammal to the trials and tribulations of patients with a curious form of brain damage that causes them to be unable to distinguish among living things Finally Yoon shows us how the reclaiming of taxonomy a renewed interest in learning the kinds and names of things around us will rekindle humanity's dwindling connection with wild nature Naming Nature has much to tell us not only about how scientists create a science but also about how the progress of science can alter the expression of our own human nature
