**NATURE RESERVES** SHAFER CRAIG L,1990 Assesses the current status of nature reserves the information available from field surveys and the results of conservation trials and explores theories and controversies in legal social and economic realms Shafer an ecologist with the National Park Service draws on ecology biogeography evolutionary biology genetics and paleobiology for his fairly technical analysis Annotation copyrighted by Book News Inc Portland OR **Nature Reserves** Craig L. Shafer,1990 **Nature Reserves** C.L. Shafer,1984 **Johannesburg** ,2002-06 **The Reintroduction of Gray Wolves to Yellowstone National Park and Central Idaho** ,1994 *Environmental Science Theory* W.T. de Groot,1992-10-22 Having no competitive works this unique publication presents a single structure for the analysis explanation and solution of environmental problems regardless of their location nature or scale In this problem oriented approach a coherent framework interconnects the study of facts and values environmental systems social causes and ethical premises Counterbalancing current biases the author emphasizes the fundamental normative economic and social scientific aspects of truly interdisciplinary environmental science For instance the normative side of environmental problems are often neglected resulting in policy designs and evaluations containing inefficient mixtures of sophisticated models and poorly grounded normative premises this is the first major study to enrich the field with more normative consistency and groundedness It is also the first text to consistently identify the social causes of environmental problems rather than focusing on the physical scientific aspects and thus design deeper and more effective policies Furthermore a tinge of post modern thinking runs throughout the book with special care being taken however to constantly keep in view the practical relevance of theory for problem oriented work The book will be of interest to environmental scientists and managers wishing to improve the consistency and depth of their work to social scientists and geographers wishing to connect their discipline to the environmental problems field and to general scientists interested in the connections between philosophy and practice

*Changing Parks* John S. Marsh,Bruce W. Hodgins,1998-05-15 This important book is a must for everyone concerned with the heritage and future of Canada s parks Contributors include an impressive assembly of noted park experts ranging from academic authorities and government parks personnel to concerned nonpolitical park supporters Since the establishment of Banff National Park in 1885 and Algonquin Provincial Park in 1893 parklands have been part of Canada s heritage Where other protected areas such as forest reserves heritage rivers and greenways have also been created a more comprehensive view of the creation and management of conservation areas and marshland is discussed Cooperative approaches to park management recognize the regional context of parks with respect to local communities as well as the inclusion of more diverse groups of people particularly Aboriginals This work encourages the general public to take an interest in our priceless park heritage *Wetland and Riparian Restoration* Society for Ecological Restoration. Conference,1997 **The Terrestrial Biosphere** S.T. Trudgill,2014-09-25 Terrestrial Biosphere tries to pose the questions which underlie the many

sided debate of how to respond to and influence change How should we view nature What do we do for the best how should we act what are we trying to achieve and what should we be guided by In doing so the book introduces and attempts to analyse not only scientific aspects of the debate but also cultural attitudes and values the notions of ecosystem stability are now challenged and it is also clear that ecosystems are renewable but not repeatable It finds that prescriptive solutions based on current constructs may not be adequate Feeling that analysis should lead to advocacy the author believes that if we can't improve predictability we have to increase adaptability which means that ecological and social capacity building should be advocated This is seen in terms of concepts institutions attitudes and values which allow for a plurality of meanings and which can cope with surprise and unforeseen change and which also facilitates responses to change **Ecotourism**

**Wild Places** Peter Prineas,1997 *Messages from the Wild* Frederick R. Gehlbach,2010-07-05 A Texas naturalist shares an intimate record of the wooded ravine near his home in this almanac based on decades of journal entries In the mid 1960s naturalist Fred Gehlbach and his family built a house on the edge of a wooded ravine in Central Texas On daily walks over the hills creek hollows and fields of the ravine Gehlbach has observed the cycles of weather and seasons the annual migrations of birds and the life cycles of animals and plants that also live there In this book Gehlbach draws on thirty five years of journal entries to present a composite day by day almanac of the life cycles of this semiwild natural island in the midst of urban Texas Recording such events as the hatching of Eastern screech owl chicks the emergence of June bugs and the first freeze of November he reminds us of nature s daily monthly and annual cycles from which humans are becoming ever more detached in our unnatural urban environments The long span of the almanac also allows Gehlbach to track how local and even global developments have affected the ravine from scars left by sewer construction to an increase in frost free days probably linked to global warming This long term record of natural cycles provides one of only two such baseline data sets for North America At the same time it is an eloquent account of one keen observer s daily interactions with his wild and human neighbors

**Environmental and Economic Issues in Forestry** Susan Shen,Arnoldo Contreras-Hermosilla,1995-01-01 World Bank Technical Paper No 281 Provides an overview of environmentally related priority issues in Asian forestry and contributes to the critical work of understanding the complex dynamics of those issues Species Survival in Fragmented Landscapes J. Settele,Chris Margules,Peter Poschlod,Klaus Henle,2012-12-06 The effects of isolation area size and habitat quality on the survival of animal and plant populations in the cultural landscape are central aspects of a research project started in Germany in 1993 Forschungsverbund Isolation FHichengroBe und BiotopqualiHit abbreviated to FIFB After a long period of

preparation scientists from seven universities and one research institution started to work within the frame of this project. Funding for four years was provided by the former German Federal Ministry of Research and Technology BMFT, now the Ministry of Education and Research BMBF. A strong focus of the project has been the improvement of the methodology for environmental impact assessments and the implementation of results into environmental planning. As there is a certain risk that national projects develop some kind of mental inertia in breeding, it was decided to discuss concepts, methods, and first results with scientists of international reputation at a rather early stage of the project. For this purpose, an international workshop was held in the small village of Lubast north of Leipzig, state of Saxony, in March 1995. 130 scientists from 10 nations met to discuss and debate issues surrounding habitat fragmentation for three days. Papers presented there formed the basis for this book. As discussions included general reviews as well as particular case studies, we decided to structure this book in a similar way. Consequently, a combination of broad and more general review-like papers as well as original papers are presented.

**Fundamentals of Biogeography** Richard J. Huggett, 2004. *Fundamentals of Biogeography* presents an appealing introduction for students and all those interested in gaining a deeper understanding of key topics and debates within the fields of biogeography, ecology, and the environment. Revealing how life has been and is adapting to its biological and physical surroundings, Huggett stresses the role of ecological, historical, and human factors in fashioning animal and plant distributions and explores how biogeography can inform conservation practice.
