Introduction

For the majority of human history, the approach towards the relationship between Humanity and Nature was perceived through the lens of binary interactions. Each was viewed as an independent entity, and many historical texts and analyses perceived either one without considering the other, and completely ignoring the connection between them. Moore identifies it as the Cartesian Dualism Model, where nature is perceived as a set of objects and resources to be used by society (Moore, 2015a: 34). This kind of view works very well in a capitalist model of the world economy, as capitalism is largely based around extracting resources and accumulation of wealth. As Moore stated in "The Four Cheap's," capitalism derives profit from getting one or more of these for free – be that either labor or resources (Moore, 2015b: 110). Expropriation of nature without any thought of restoring or spending it sparingly is the face of modern global capitalism nowadays. It brought upon many crises, ranging from global warming to inevitable dwindling of crucial resources like oil and drinking water (Klare, 2012: 21). Deforestation, pollution, corruption of the environment – these are not only the traits of the existence of the human race but also traits brought upon by the emergence of capitalism (Moore, 2015c: 175). The purpose of this paper is to perceive historical change through the lens of these four realms: Nature, Technology, Capitalism, and Society, to outline and understand interactions between them and understand the nature of the crises occurring on Earth today.

NATURE AS A WEB OF LIFE

Criticism of the Cartesian Dualism Model and the formation of new Green Thought began in the 1970s, with political ecology, ecological economics, systems ecology, resource conservation, and other concepts starting to appear and playing a bigger role in our society (Moore, 2015a: 34). The emergence of the new concept called the Oikeios. This framework describes nature not as a resource pile and a waste bin combined, but as a medium in which humanity exists (Moore, 2015a: 35). This medium

Nature, Technology, and Society Victor Ferkiss, 1994-11 Traces cultural attitudes toward the environment and technology across the span of human civilization While all human societies have enlisted technologies to control nature the last hundred years have witnessed the technological exploitation and destruction of natural resources on an unprecedented scale As environmental groups and the scientific community sound the alarm about deforestation global warming and ozone depletion the obvious question arises how did we get where we are today In *Nature Technology and Society* Victor Ferkiss sets out to answer this central question arguing that we cannot escape from our present environmental predicament unless we understand the ideas which have created it Ferkiss asks the basic questions concerning humans and their relationship to the environment He traces cultural attitudes towards the environment from early mankind to the present day This fascinating book is distinctive both in its comprehensiveness and in its attempt to place side by side influential thinkers and movements with varied views on these issues

Nature Technology Emile H. Ishida, Ryuzo Furukawa, 2013-12-19 The Great East Japan Earthquake which occurred on March 11 2011 reminded us that we were just one species within the great cycle of life on earth that we were allowed to survive only because of nature and that the idea that we were somehow able to conquer nature was simply an illusion Now more than ever it is time that we confront head on the change from the underground resources type of civilization to one with a new way of life and technology that embraces a sense of nature To do so we must learn from nature the only sustainable society on earth and create technology that embraces such a view of nature We call such technology which cleverly revives nature's greatness *Nature Technology* Taking a casual glance at nature a nest of termites in the savanna region can be observed to maintain a steady temperature of 30 C despite the fact that the outside air temperature ranges from 50 C during the day to nearly 0 C at night There are countless numbers of open pores just several billionths of a meter nanometer wide in the earth of the nest which serve to regulate the temperature and humidity In fact all kinds of earth have these pores clay mineral with aggregated structures and air conditioners that require no electricity have been created by hardening this earth while preserving its structure a cooling floor or wall becomes the alternative to a conventional air conditioner This book provides many such examples of how *Nature Technology* can support a new lifestyle that is both environmentally sound and spiritually uplifting
