## **Natures Economy The Roots Of Ecology:**

Nature's Economy Donald Worster, 1977      **Nature's Economy** Donald Worster, 1994-06-24 Nature's Economy is a wide ranging investigation of ecology's past first published in 1994 It traces the origins of the concept discusses the thinkers who have shaped it and shows how it in turn has shaped the modern perception of our place in nature Our view of the living world is a product of culture and the development of ecology since the eighteenth century has closely reflected society's changing concerns Donald Worster focuses on these dramatic shifts in outlook and on the individuals whose work has expressed and influenced society's point of view The book includes portraits of Linnaeus Gilbert White Darwin Thoreau and such key twentieth century ecologists as Rachel Carson Frederic Clements Aldo Leopold James Lovelock and Eugene Odum      *More Heat than Life: The Tangled Roots of Ecology, Energy, and Economics* Jeremy Walker, 2020-07-14 This book traces the interacting histories of the disciplines of ecology and economics from their common origin in the ancient Greek concept of oikonomia through their distinct encounters with energy physics to the current obstruction of neoliberal economics to responses to the ecological and climate crisis of the so called Anthropocene Reconstructing their constitution as separate sciences in the era of fossil fuelled industrial capitalism the book offers an explanation of how the ecological sciences have moved from a position of critical collision with mainstream economics in the 1970s to one of collusion with the project of permanent growth in and through the thermal crisis of the biosphere      *Roots of Ecology* Frank N. Egerton, 2012-07-17 Ecological questions are at the center of many of the most important decisions faced by humanity Roots of Ecology documents the deep ancestry of this enormously important science from the early ideas of Herodotus Plato and Pliny up through those of Linnaeus and Darwin to those that inspired Ernst Haeckel's mid nineteenth century neologism ecology Based on a long running series of regularly published columns this important work gathers a vast literature that illustrates the development of the ecological concepts environmental ideas and creative reasoning that have led to our modern view of ecology Roots of Ecology should be on every ecologist's shelf Back cover      **Law and Ecology** Richard O. Brooks, Ross Jones, 2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines This description is followed by a history of their episodic interactions the early period of origin the mid century formative period from 1950 to 1970 the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades Utilizing a number of case studies examinations of the key linkage persons legal instruments and the migration of ecological concepts and frameworks this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship

between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law

**Nature in the History of Economic Thought** Nathaniel Wolloch, 2016-10-04 From antiquity to our own time those interested in political economy have with almost no exceptions regarded the natural physical environment as a resource meant for human use Focusing on the period 1600 1850 and paying particular attention to major figures including Adam Smith T R Malthus David Ricardo and J S Mill this book provides a detailed overview of the intellectual history of the economic consideration of nature from antiquity to modern times It shows how even someone like Mill who was clearly influenced by romantic notions regarding the spiritual need for contact with pristine nature ultimately regarded it as an economic resource Building on existing scholarship this study demonstrates how the rise of modern sensitivity to nature from the late eighteenth century in particular was in fact a dialectical reaction to the growing distance of modern urban civilization from the natural environment As such the book offers an unprecedentedly detailed overview of the intellectual history of economic considerations of nature whilst underlining how the history of this topic has been remarkably consistent

The Philosophical Roots of the Ecological Crisis Joshtrom Isaac Kureethadam, 2018-06-11 The Philosophical Roots of the Ecological Crisis Descartes and the Modern Worldview traces the conceptual sources of the present environmental degradation within the worldview of Modernity and particularly within the thought of Ren Descartes universally acclaimed as the father of modern philosophy The book demonstrates how the triple foundations of the Modern worldview in terms of an exaggerated anthropocentrism a mechanistic conception of the natural world and the metaphysical dualism between humanity and the rest of the physical world can all be largely traced back to Cartesian thought with direct ecological consequences

**The Rights of Nature** Roderick Frazier Nash, 1989-01-17 Charting the history of contemporary philosophical and religious beliefs regarding nature Roderick Nash focuses primarily on changing attitudes toward nature in the United States His work is the first comprehensive history of the concept that nature has rights and that American liberalism has in effect been extended to the nonhuman world A splendid book Roderick Nash has written another classic This exploration of a new dimension in environmental ethics is both illuminating and overdue

Stewart Udall His account makes history come alive Sierra So smoothly written that one almost does not notice the breadth of scholarship that went into this original and important work of environmental history Philip Shabecoff New York Times Book Review Clarifying and challenging this is an essential text for deep ecologists and ecophilosophers Stephanie Mills Utne Reader

**The Language of Landscape** Anne Whiston Spirn, 1998-01-01 This eloquent and powerful book combines poetry and pragmatism to teach the language of landscape Anne Whiston Spirn author of the award winning The Granite Garden Urban Nature and Human Design argues that the language of landscape exists with its own syntax grammar and metaphors and that we imperil ourselves by failing to learn to read and speak this language To understand the meanings of landscape our habitat is to see the world differently and to

enable ourselves to avoid profound aesthetic and environmental mistakes Offering examples that range across thousands of years and five continents Spirn examines urban rural and natural landscapes She discusses the thought of renowned landscape authors Thomas Jefferson Frank Lloyd Wright Frederick Law Olmsted Lawrence Halprin and of less well known pioneers including Australian architect Glenn Murcutt and Danish landscape artist C Th S rensen She discusses instances of great landscape designers using landscape fluently masterfully and sometimes cynically And in a probing analysis of the many meanings of landscape Spirn shows how one person s ideal landscape may be another s nightmare how Utopian landscapes can be dark There is danger when we lose the connection between a place and our understanding of it Spirn warns and she calls for change in the way we shape our environment based on the notions of nature as a set of ideas and landscape as the expression of action and ideas in place

*Conservation's Roots* Abigail P. Dowling, Richard Keyser, 2020-06-11 The ideas and practices that comprise conservation are often assumed to have arisen within the last two centuries However while conservation today has been undeniably entwined with processes of modernity its historical roots run much deeper Considering a variety of preindustrial European settings this book assembles case studies from the medieval and early modern eras to demonstrate that practices like those advocated by modern conservationists were far more widespread and intentional than is widely acknowledged As the first book length treatment of the subject *Conservation's Roots* provides broad social historical and environmental context for the emergence of the nineteenth century conservation movement

*Encyclopedia of Historians and Historical Writing* Kelly Boyd, 2019-10-09 The *Encyclopedia of Historians and Historical Writing* contains over 800 entries ranging from Lord Acton and Anna Comnena to Howard Zinn and from Herodotus to Simon Schama Over 300 contributors from around the world have composed critical assessments of historians from the beginning of historical writing to the present day including individuals from related disciplines like J rgen Habermas and Clifford Geertz whose theoretical contributions have informed historical debate Additionally the *Encyclopedia* includes some 200 essays treating the development of national regional and topical historiographies from the Ancient Near East to the history of sexuality In addition to the Western tradition it includes substantial assessments of African Asian and Latin American historians and debates on gender and subaltern studies

*Reader's Guide to the History of Science* Arne Hessenbruch, 2013-12-16 The *Reader's Guide to the History of Science* looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn

**Green History** Derek Wall, 2003-09-02 Charting the origins of the modern ecology movement over more than two thousand years this volume gives a voice to those hidden from history revealing green themes within artistic and scientific thought

*Speaking with Nature* Ramachandra Guha, 2024-10-29 From one of the world s leading historians comes the first substantial study of

environmentalism set in any country outside the Euro American world By the canons of orthodox social science countries like India are not supposed to have an environmental consciousness They are as it were too poor to be green In this deeply researched book Ramachandra Guha challenges this narrative by revealing a virtually unknown prehistory of the global movement set far outside Europe or America Long before the publication of Rachel Carson's Silent Spring and well before climate change ten remarkable individuals wrote with deep insight about the dangers of environmental abuse from within an Indian context In strikingly contemporary language Rabindranath Tagore Radhakamal Mukerjee J C Kumarappa Patrick Geddes Albert and Gabrielle Howard Mira Verrier Elwin K M Munshi and M Krishnan wrote about the forest and the wild soil and water urbanization and industrialization Positing the idea of what Guha calls livelihood environmentalism in contrast to the full stomach environmentalism of the affluent world these writers activists and scientists played a pioneering role in shaping global conversations about humanity's relationship with nature Spanning more than a century of Indian history and decidedly transnational in reference this book offers rich resources for considering the threat of climate change today

*Nature: From nature to natures : contestation and reconstruction* David Inglis, John Bone, Rhoda Wilkie, 2005 Many influential stances within the social sciences regard nature in one of two ways either as none of their concern which is with the social and cultural aspects of human existence or as wholly a social and cultural fabrication But there is also another strand of social scientific thinking that seeks to understand the interplay between social and cultural factors on one side and natural factors on the other These volumes contain the main contributions that have been made within each of these streams of thought The selections illustrate to the reader the complexity of the various positions within these streams and the strengths and limitations of each perspective A new introduction places these articles in their historical and intellectual context and the volumes are completed with an extensive index and chronological table of contents

*Encyclopedia of Ecology* Brian D. Fath, 2018-08-23 Encyclopedia of Ecology Second Edition Four Volume Set continues the acclaimed work of the previous edition published in 2008 It covers all scales of biological organization from organisms to populations to communities and ecosystems Laboratory field simulation modelling and theoretical approaches are presented to show how living systems sustain structure and function in space and time New areas of focus include micro and macro scales molecular and genetic ecology and global ecology e.g. climate change earth transformations ecosystem services and the food water energy nexus are included In addition new international experts in ecology contribute on a variety of topics Offers the most broad ranging and comprehensive resource available in the field of ecology Provides foundational content and suggests further reading Incorporates the expertise of over 500 outstanding investigators in the field of ecology including top young scientists with both research and teaching experience Includes multimedia resources such as an Interactive Map Viewer and links to a CSDMS Community Surface Dynamics Modeling System an open source platform for modelers to share and link models dealing with earth system processes

Environmental Ethics, Ecological Theology, and Natural Selection Lisa H.

Sideris,2003 Lisa Sideris proposes a new way of thinking about the natural world an environmental ethic that incorporates the ideas of natural selection and values the processes rather than the products of nature Such an approach encourages us to take a minimally interventionist approach to nature Only when the competitive realities of evolution are faced squarely Sideris argues can we generate practical environmental principles to deal with such issues as species extinction and the relationship between suffering and sentience      **Nature and Ideology** Joachim Wolschke-Bulmahn,1997 The essays in this volume explore the broad range of ideas about nature reflected in twentieth century concepts of natural gardens and their ideological implications They also investigate garden designers use of earlier ideas of natural gardens and their relationship to the rich model that nature offers      *Planning for the Planet* Simone Schleper,2019-07-12 During the 1960s and 1970s rapidly growing environmental awareness and concern created unprecedented demand for ecological expertise and novel challenges for ecological advocacy groups such as the International Union for Conservation of Nature and Natural Resources IUCN This book reveals how despite their vast scientific knowledge and their attempts to incorporate socially relevant themes IUCN experts inevitably struggled to make global schemes for nature conservation a central concern for UNESCO UNEP and other intergovernmental organizations      **Nature Ethics** Marti Kheel,2008 In *Nature Ethics An Ecofeminist Perspective* Marti Kheel explores the underlying worldview of nature ethics offering an alternative ecofeminist approach Seeking to heal the divisions between the seemingly disparate movements and philosophies of feminism animal advocacy environmental ethics and holistic health Kheel proposes an ecofeminist philosophy that underscores the importance of empathy and care for individual beings as well as larger wholes
