Nazi Science Myth Truth And The German Atomic Bomb:

Nazi Science Mark Walker, 2008-01-06 In this book Mark Walker a historical scholar of Nazi science brings to light the overwhelming impact of Hitler's regime on science and ultimately on the pursuit of the German atomic bomb Walker meticulously draws on hundreds of original documents to examine the role of German scientists in the rise and fall of the Third Reich He investigates whether most German scientists during Hitler's regime enthusiastically embraced the tenets of National Socialism or cooperated in a Faustian pact for financial support which contributed to National Socialism's running rampant and culminated in the rape of Europe and the genocide of millions of Jews This work unravels the myths and controversies surrounding Hitler's atomic bomb project It provides a look at what surprisingly turned out to be an Achilles heel for Hitler the misuse of science and scientists in the service of the Third Reich **The Race for the Atomic Bomb**

Norman Ridley, 2023-04-06 On 19 December 1938 Otto Hahn working at the Kaiser Wilhelm Institute for Chemistry in Berlin conducted an experiment the results of which baffled him It took his migr collaborator Lise Meitner to explain that he had split an atom of uranium which at the time seemed to defy all known laws of physics When Neils Bohr took this news to the United States it became clear to scientists there that these results opened a completely new and for some horrifying possibility of energy production that could be used for both peaceful and military purposes Scientists in Germany France Britain and the US began to delve deeper into the implications But it was the British government that was the first to explicitly describe how the splitting of the atom might be utilized to create a practical weapon of fearsome power France by then had been occupied by the Germans and most of their nuclear scientists had fled to Britain For their part the Germans who for a time were at the very forefront of nuclear research had weakened their own scientific ranks by hounding many of their best scientists who had fled persecution under the draconian Nazi racial laws They still retained however possibly the ablest nuclear scientist of them all in Werner Heisenberg who set about developing his own program for nuclear power British scientists made extensive progress before realizing that translating their laboratory results into the vast industrial enterprise required to build a bomb was way beyond the nation's stretched resources The government agreed to hand over all the UK's research findings to America in return for a share of the spoils The United States for its part was impressed with British results and invested enormous sums of money and resources into what became known as the Manhattan Project in a concerted effort to build a bomb before the end of the war For much of the war the Soviets showed little enthusiasm for the sort of investment required to build their own bomb However with an eye to the future they established an extensive espionage network both in Britain and America Following the German surrender there was still the problem of Japan and the race continued to develop a working bomb to accelerate the end of the war both to save Allied lives and to prevent Soviet expansion into northern China and the Japanese mainland It was a race that the United States won It was also a race that ushered in a new Cold War *British Exploitation of German Science and Technology, 1943-1949* Charlie Hall, 2019-01-16

At the end of the Second World War Germany lay at the mercy of its occupiers all of whom launched programmes of scientific and technological exploitation Each occupying nation sought to bolster their own armouries and industries with the spoils of war and Britain was no exception Shrouded in secrecy yet directed at the top levels of government and driven by ingenuity from across the civil service and armed forces Britain made exploitation a key priority By examining factories and laboratories confiscating prototypes and blueprints and interrogating and even recruiting German experts Britain sought to utilise the innovations of the last war to prepare for the next This ground breaking book tells the full story of British exploitation for the first time sheds new light on the legacies of the Second World War and contributes to histories of intelligence science warfare and power in the midst of the twentieth century *A Global History of the Nuclear Arms Race* Richard Dean Burns, Joseph M. Siracusa, 2013-04-23 Written by two preeminent authors in the field this book provides an accessible global narrative of the nuclear arms race since 1945 that focuses on the roles of key scientists military chiefs and political leaders The first book of its kind to provide a global perspective of the arms race this two volume work connects episodes worldwide involving nuclear weapons in a comprehensive narrative fashion Beginning with a discussion of the scientific research of the 1930s and 1940s and the Hiroshima decision the authors focus on five basic themes political dimensions technological developments military and diplomatic strategies and impact The history of the international nuclear arms race is examined within the context of four historical eras America's nuclear monopoly America's nuclear superiority superpower parity and the post Cold War era Information about the historical development of the independent deterrence of Britain France and China as well as the piecemeal deterrence of newcomers Israel India Pakistan and North Korea is also included as is coverage of the efforts aimed at the international control of nuclear weapons and the diplomatic architecture that underpins the global nuclear non proliferation regime **The Politics of Nuclear Weapons** Andrew Futter, 2015-02-18 This book provides an introduction to political and strategic aspects of nuclear weaponry It offers an accessible overview of the concept of nuclear weapons outlines how thinking about these weapons has developed and considers how nuclear threats can continue to be managed in the future It includes Coverage of nuclear testing proliferation strategy global actors and disarmament Analysis of contemporary topics such as nuclear terrorism A timeline of key nuclear events Annotated further reading lists helping you to locate sources for essays and assignments Summaries study questions and a glossary of key terms Free SAGE journal articles available on the Resources tab The author will be providing regular updates to his suggested web resources so be sure to check the Resources tab for the most up to date *The Politics of Nuclear Weapons* is essential reading for both undergraduate and postgraduate students taking courses in Nuclear Politics *The Oxford Handbook of World War II* G. Kurt Piehler, Jonathan A. Grant, 2023 World War II dramatically transformed human life and society resulting in the deaths of 100 million people and shaping the worldview and psyches of generations The Oxford Handbook of World War II broadens traditional narratives of the war and in the process changes our understanding of this

epic conflict Spanning the rise and fall of the Versailles system to the postwar reintegration of veterans and the eventual commemoration of the conflict and its victims The Oxford Handbook of World War II marks a landmark contribution to the historical literature of war **World War II in Literature for Youth** Patricia Hachten Wee, Robert James Wee, 2004-11-10

This comprehensive volume provides a wealth of information with annotated listings of more than 3 500 titles a broad sampling of books on the war years 1939 1945 Includes both fiction and nonfiction works about all aspects of the war Professional resources for educators aligned to the educational standards for social studies technical references periodicals and electronic resources a directory of WWII museums memorials and other institutions and topics for exploration

complement this excellent library and classroom resource **Nuclear Dawn** Kenneth D. McRae, 2014-03-20 This book provides a rounded biography of Franz later Sir Francis Simon his early life in Germany his move to Oxford in 1933 and his experimental contributions to low temperature physics approximating absolute zero After 1939 he switched his research to nuclear physics and is credited with solving the problem of uranium isotope separation by gaseous diffusion for the British nuclear programme Tube Alloys The volume is distinctive for its inclusion of source materials not available to previous researchers such as Simon's diary and his correspondence with his wife and for a fresh well informed insider voice on the five power nuclear rivalry of the war years The work also draws on a relatively mature nuclear literature to attempt a comparison and evaluation of the five nuclear rivals in wider political and military context and to identify the factors or groups of factors that can explain the results The Nuclear Spies Vince Houghton, 2019-09-15 Why did the US intelligence services fail so spectacularly to know about the Soviet Union's nuclear capabilities following World War II As Vince Houghton historian and curator of the International Spy Museum in Washington DC shows us that disastrous failure came just a few years after the Manhattan Project's intelligence team had penetrated the Third Reich and knew every detail of the Nazi's plan for an atomic bomb What changed and what went wrong Houghton's delightful retelling of this fascinating case of American spy ineffectiveness in the then new field of scientific intelligence provides us with a new look at the early years of the Cold War During that time scientific intelligence quickly grew to become a significant portion of the CIA budget as it struggled to contend with the incredible advance in weapons and other scientific discoveries immediately after World War II As The Nuclear Spies shows the abilities of the Soviet Union's scientists its research facilities and laboratories and its educational system became a key consideration for the CIA in assessing the threat level of its most potent foe Sadly for the CIA scientific intelligence was extremely difficult to do well For when the Soviet Union detonated its first atomic bomb in 1949 no one in the American intelligence services saw it coming **Hitler's Uranium Club** Jeremy Bernstein, 2013-03-09 From April through December of 1945 ten of Nazi Germany's greatest nuclear physicists were detained by Allied military and intelligence services in a kind of gilded cage at Farm Hall an English country manor near Cambridge The physicists knew the Reich had failed to develop an atomic bomb and they soon learned from a BBC radio report on August 6 that the Allies had

succeeded in their own efforts to create such a weapon But what they did not know was that many of their meetings and private conversations were being monitored and recorded by British agents This book contains the complete collection of transcripts that were made from these secret recordings providing an unprecedented view of how the German scientists including two Nobel Laureates thought and spoke about their roles during the war
