Applications of NDT Data Fusion Xavier E. Gros, 2011-09-01 Non destructive testing NDT systems can generate incomplete incorrect or conflicting information about a flaw or a defect Therefore the use of more than one NDT system is usually required for accurate defect detection and or quantification In addition to a reduction in inspection time important cost savings could be achieved if a data fusion process is developed to combine signals from multisensor systems for manual and remotely operated inspections This gathering of data from multiple sources and an efficient processing of information help in decision making reduce signal uncertainty and increase the overall performance of a non destructive examination This book gathers for the first time essays from leading NDT experts involved in data fusion It explores the concept of data fusion by providing a comprehensive review and analysis of the applications of NDT data fusion This publication concentrates on NDT data fusion for industrial applications and highlights progress and applications in the field of data fusion in areas ranging from materials testing in the aerospace industry to medical applications Each chapter contains a specific case study with a theoretical part but also presents experimental results from a practical point of view The book should be considered more as a pragmatic introduction to the applications of NDT data fusion rather than a rigorous basis for theoretical studies

NDT Data Fusion Xavier Gros, 1996-11-01 Data fusion is a rapidly developing technology which involves the combination of information supplied by several NDT Non Destructive Testing sensors to provide a more complete and understandable picture of structural integrity This text is the first to be devoted exclusively to the concept of multisensor integration and data fusion applied to NDT The advantages of this methodology are widely acknowledged and the author presents an excellent introduction to data fusion processes Problems are approached progressively through detailed case studies offering practical guidance for those wishing to develop and explore NDT data fusion further This book will prove invaluable to inspectors students and researchers concerned with NDT signal processing measurements and testing It shows the great value and major benefits which can be achieved by implementing multisensor data fusion not only in NDT but also in any discipline where measurements and testing are key activities
