Otolaryngology in Chinese Medicine Daonan Yan, Ko-hsin Hu, 2013-06-20 This textbook provides a comprehensive view of TCM Otolaryngology based in part on the Chinese medical literature of the past 2 000 years which contains abundant references to diseases of the ears nose throat and mouth. Some of these theories and techniques continue to be used in clinics today while others have fallen into disuse. Otolaryngology has developed rapidly in modern times and thus many biomedical diagnostic and treatment methods have been integrated into TCM otolaryngology. Knowledge of both traditional theories and modern technology as well as sufficient clinical experience are necessary for a comprehensive understanding of the topic as provided here. We are sorry that the DVD content are not included Otolaryngology/head and Neck Surgery Combat Casualty Care in Operation Iraqi Freedom and Operation Enduring Freedom Joseph A. Brennan, G. Joy and International Relations Elina Penttinen,2013-09-02 This book aims to develop new methodology for the study of international relations IR based on joy informed by current thinking about posthumanism feminist theory and positive psychology It examines how the mechanistic deterministic worldview derived from the Newtonian model has influenced the epistemology and methodology of IR i e the idea that the world is constituted of independent fragments and seeks ways to develop a new methodology for IR by drawing on the potential of a non fragmented worldview The author argues that it is this modern Western view of human beings or societies as isolated and separate from the world that prevents IR from finding new solutions to the questions of war and conflict Drawing upon case studies testimonies and examples from film this book instead proposes joy as an alternative methodology for studying IR exploring the possibility of self healing in physical and emotional trauma in extreme violent conditions The author also discusses how posthumanism contributes to positive psychology in understanding happiness and empowerment and demonstrates how these findings can further widen the study of IR This book will be of much interest to students of gender studies war and conflict studies IR theory and critical security studies

Mundane Governance Steve Woolgar,Daniel Neyland,2013-11-28 What is to be made of the outcry when newly issued recycling wheelie bins are discovered to contain microchips for weighing and evaluating householders rubbish The angry accusations that speed

cameras are generating excessive income for the government The consternation at the measures taken by airports to heighten security in the wake of the increased threat of terrorist attacks These increasingly widespread reactions to ordinary events and everyday phenomena share a common theme They all embody concerns about the ways in which our lives are increasingly regulated and controlled in relation to ordinary objects and technologies This book takes these concerns as the starting point for exploring the ways in which relations of governance and accountability in contemporary life are organized around ordinary everyday pervasive objects and technologies In contrast to the contemporary literature on governance the book argues for the importance of examining how accountability relations are enacted on the ground in relation to mundane objects and technologies In particular it is crucial to understand how governance and accountability are mediated through material relations involving ordinary everyday objects and technologies The book argues that the key to understanding governance is to focus on political constitution at the level of ontology rather than just on the traditional politics of organization structure and human compliance The term ontology is used here to draw attention to the social and cultural processes whereby the nature and existence of ordinary things come to matter The argument is developed in relation to a wide variety of empirical materials drawn from three main areas of everyday life waste management and recycling the regulation and control of traffic especially speed cameras and parking and security and passenger movement in airports
