Pathobiology Of Neoplasia:

The Pathobiology of Neoplasia A.E. Sirica, 2012-12-06 This book is directed primarily to advanced graduate and medical students postdoctoral trainees and established investigators having basic research interests in neoplasia Its content is based in part on the lecture outlines and selected histopathology laboratory components of an advanced course entitled The Pathobiology of Experimental Animal and Human Neoplasia developed by me for the Experimental Pathology Curriculum of the Department of Pathology at the Medical College of Virginia In this regard an effort has been made to integrate pathology with carcinogenesis genetics biochemistry and cellular and molecular biology in order to present a comprehensive and current view of the neoplastic process For focus emphasis is mainly being placed on the neoplastic cells themselves and not on associated host mediated responses It is hoped that this book will accomplish its purpose of providing students and researchers who already possess strong but diverse basic science backgrounds with unifying concepts in tumor pathobiology so as to stimulate new research aimed at furthering our understanding of neoplastic disease I wish to express my appreciation and heartfelt thanks to the authors whose individual ranges of expertise and research experience clearly bring to their respective chapters unique perspectives that easily transcend any redundancy that may be present In addition I am grateful to Drs George Vennart Saul Kay and Fred Meier and to Ms Connie Wilkerson of the Department of Pathology at MCV for their helpful comments and their review of some of the material

Pathobiology of Neoplasia Richmond T. Prehn, Liisa M. Prehn, American Association of Pathologists and Bacteriologists, American Journal of Pathology, 1975

Molecular Pathology of Early Cancer Sudhir Srivastava, Donald Earl Henson, Adi F. Gazdar, 1999 This book describes the principles and the application of the existing molecular methodology for the detection of early cancer Discussion focuses on the molecular changes characterizing preneoplastic lesions molecular targets for early detection validation of molecular targets and new diagnostic technology for early detection The advantages of molecular detection over current methods are examined as well as the importance of identifying and characterizing preneoplastic lesions In addition to the uses of highly specific molecular probes to detect early cancer this book demonstrates the many ways in which molecular markers serve oncology While meeting pressing needs in the practice of medicine molecular detection of early cancer scientifically necessitates a confrontation with the biology of cancer such as the genetic determinants of progression regression dormancy and invasion This work not only discusses the diagnostic value of these molecular methods but views their practical benefits against a background of conventional morphology

Pathobiology of Human Germ Cell Neoplasia J. Wolter Oosterhuis, Heinrich Walt, Ivan Damjanov, 2012-12-06 Pathobiology of Human Germ Cell Neoplasia is a state of the art compendium on a very recent branch of tumor biology It offers an awareness and understanding of germ cell tumors from the earliest stages to their various differentiations Original data for this volume was supplied by experts in the fields of pathology developmental biology genetics molecular biology and other related fields This compilation of knowledge provides information necessary to
