Alcoholic Liver Disease, An Issue of Clinics in Liver Disease Stanley Cohen, 2016-07-15

Alcohol abuse remains a significant problem world wide. The most commonly affected organ remains the liver with a risk of alcoholic liver disease (ALD) which can range from asymptomatic to alcoholic hepatitis to alcoholic cirrhosis. In 2010 alcohol attributable cirrhosis was responsible for 0.9% of all global deaths. Given the sheer magnitude of alcohol abuse and alcoholic liver disease an update on this topic is pertinent and relevant. This issue will focus on a variety of topics including alcoholism, the pathogenesis of ALD, the spectrum of ALD, the pathology of ALD and the long term management of patients with ALD. Alcoholic hepatitis is a particular type of ALD with a high mortality. This issue will explore the syndrome of alcoholic hepatitis, its prognostic markers and the available therapies. Because alcohol intake can influence so many other conditions of the liver especially hepatitis C, articles in this issue will also explore the impact of alcohol abuse on other liver conditions. In addition several other topics such as nutritional therapy for ALD, ALD and liver cancer and ALD and infection risk will be explored. Also even though it is quite controversial we will also explore liver transplant as a therapy for alcoholic liver disease including alcoholic hepatitis.
