In recent decades we have enhanced our understanding of the pathophysiology and genetics of rare and common causes of kidney stones. With our evolving understanding of the epidemiology, biology and genetics of nephrolithiasis and the advances in therapeutic technologies we have made significant progress in patient care. Furthermore, advances in the medical management and surgical technologies have allowed us to embellish the optimal outcomes in the management of complex kidney stone disease.

Pathophysiology of Renal Disease E. Ritz, S. G. Massry, 1982-07-14 **Renal Stone Disease** Charles Y.C. Pak, 2012-12-06

CHARLES Y c PAK: Major progress has been made in the pathophysiologic elucidation and management of nephrolithiasis during the past two decades. It is now possible to detect the cause of stone disease in more than 95% of patients to prevent recurrent formation of stones in the majority of patients and to remove most existing stones less invasively. The assumption of editorship of this book permits me to indulge in the discussion of this progress from my personal perspective. Three somewhat fortuitous events in my academic career dictated my directing major efforts in stone research. The first event occurred in 1963 when after having completed medical training I was faced with two years of military service as a participant of the Berry plan. Choices were limited and disconcerting for someone interested in a research career: a staff physician at a military installation or an Indian reservation or a member of a research team in a state penitentiary. An interesting article by Norman Gershfeld on phospholipid monolayers prompted me to write him seeking a position in his laboratory of Health NIH in Bethesda MD. Partly because of that, at the National Institutes my rudimentary exposure and publication in surface chemistry I was offered a position as a staff scientist and a position in the Public Health Service which satisfied the requirements of a military service.

Urinary Tract Stone Disease Nagaraja P. Rao, Glenn M. Preminger, John P. Kavanagh, 2011-01-06

Urinary stone disease constitutes more than a quarter of urologists' workload in the Western countries and is more than half in the Middle East and Central Asian countries. The surgical management of stone disease has changed considerably in the last five years and our understanding of mechanism of stone disease has improved with some old concepts discarded and newer theories gaining ground. Covering the entire spectrum of urinary stone disease and with contributions of more than fifty internationally recognised experts, this exhaustive and complex reference work will be invaluable to all urologists, nephrologists and non medical scientists.
