

The pathological physiology is related to the other sciences.

There are following connections:

- a) to the sciences, which study illness causing environmental factors (physics, chemistry, biology, microbiology, the social sciences), they are necessary for etiology studying;
- b) to the sciences, which study the organism properties and its vital functions (cytology, embryology, histology, the normal physiology, biochemistry, immunology, genetics), they create a base for pathogenesis study;
- c) to general theoretic sciences, which study an the disease (pathological anatomy, pharmacology), in common with pathological physiology create a total picture of the illness;
- to the clinical sciences, helping to determine the basic etiological and pathogenic principles of disease prophylaxy, diagnostics and cure.
