Pathology Of Cardiac Valves:

Pathology of Cardiac Valve Disease Gaetano Thiene, Cristina Basso, Stefania Rizzo, Mila Della Barbera, Marialuisa Valente, Uberto Bortolotti, 2023-09-30 Cardiac valve diseases are a major cause of morbidity and mortality around the globe In third world countries inflammatory rheumatic valve disease in the young represents an endemic calamity while in Western countries degenerative valve diseases like senile calcific aortic stenosis and mitral valve prolapse as a result of mucoid degeneration with incompetence are major causes of death in adults the elderly Since the 1960s surgical valve replacement has been the only treatment option requiring sternotomy cardiopulmonary bypass and cardiac arrest Permanent anticoagulation for mechanical valves and the limited durability of biological valves constituted significant drawbacks moreover these surgeries often requires surgical replacement The cardiac registry at the University of Padua Italy has gathered more than twelve hundred cases of failed prosthetic valves offering a unique resource for teaching and research Conservative valve repair using minimally invasive technique showed that replacement of the native valve with sternotomy can be spared Moreover in the last decade venous or arterial approaches like TAVI were developed Presenting the essential surgical and interventional anatomy and pathology in detail this book offers a valuable tool for cardiologists cardiac surgeons and pathologists as well as people in training and scientists working in the field of medical devices and biological compatibility

Pathology of Heart Valve Replacement A.G. Rose, 2012-12-06 Dr Rose honoured me with a request for a Foreword I am delighted to oblige The treatment of valvular heart disease has improved remarkably in the past 40 years Many factors have contributed not least being the introduction of artificial heart valves for treatment more than 25 years ago Their use has shown that they are good but not an ideal substitute for native valves A galaxy of pathological changes are associated with the insertion and malfunction of artificial heart valves Each has to be defined classified and related to clinical procedures or problems with a prosthesis then a means sought to prevent them Often in understanding their cause investigative procedures have will improve patient care and broaden knowledge in other spheres Dr Rose has been a student of this pathology for many years and has made many contributions No doubt his interest in the area was whetted by colleagues in Cape Town leaders in the field of cardiovascular medicine and surgery This monograph provides a collected review of his experience In it one finds lessons in geographic pathology in considering the causes of valvular heart disease in Cape Town and valuable information regarding the identification of artificial heart valves and a means of examining a heart bearing one

S. Borer, O. W. Isom, 2002-07 Diseased heart valves are a growing public health concern ranging among the most important causes of heart failure and sudden death This volume reviews the most current information on valvular disease pathophysiology epidemiology and evaluation as well as management strategies for affected patients Topics discussed include data supporting selection of asymptomatic patients for valve surgery methods employed in evaluating patients for this purpose surgical methods and valve prostheses currently applied for valve repair and replacement and criteria for selecting among them Adjunctive problems such as aortic root disease infective endocarditis and arrhythmias that may modify patient management are also considered Epidemiologic data illustrate the increasing prevalence of valvular disease in the population In addition the book reviews new and emerging knowledge about the molecular and cellular basis of myocardial dysfunction and heart failure in various forms of valvular disease and new information about the potential roles of alternative medicine blood conservation and minimally invasive surgical techniques A particular highlight is a debate between paired chapters on the appropriateness of mitral valve surgery for patients with less than severe mitral regurgitation of ischemic etiology Compiling the most up to date and authoritative information in the field this book will be of great value not only to cardiologists and cardiac surgeons but also to medical students medical and surgical residents cardiology and cardiac surgery fellows and general internists **Pathophysiology, Evaluation and Management of Valvular Heart Disease** Jeffrey S. Borer, O. Wayne Isom, Cornell University. Howard Gilman Institute for Valvular Heart Diseases, 2002-01-01 Diseased heart valves are a growing public health concern ranging among the most important causes of heart failure and sudden death This volume reviews the most current information on valvular disease pathophysiology epidemiology and evaluation as well as management strategies for affected patients Topics discussed include data supporting selection of asymptomatic patients for valve surgery methods employed in evaluating patients for this purpose surgical

methods and valve prostheses currently applied for valve repair and replacement and criteria for selecting among them. Adjunctive problems such as aortic root disease, infective endocarditis, and arrhythmias that may modify patient management are also considered. Epidemiologic data illustrate the increasing prevalence of valvular disease in the population. In addition, the book reviews new and emerging knowledge about the molecular and cellular basis of myocardial dysfunction and heart failure in various forms of valvular disease and new information about the potential roles of alternative medicine, blood conservation, and minimally invasive surgical techniques. A particular highlight is a debate between paired chapters on the appropriateness of mitral valve surgery for patients with less than severe mitral regurgitation of ischemic etiology. Compiling the most up to date and authoritative information in the field, this book will be of great value not only to cardiologists and cardiac surgeons but also to medical students, medical and surgical residents, cardiology and cardiac surgery fellows, and general internists.

Yankah, R. Hetzer, C. Miller, D.N. Ross, J. Somerville, M.H. Yacoub, 2012-12-06 It was the genius of Gordon Murray in Toronto that introduced the use of allografts into cardiac surgery in the 1950s Soon after this on opposite sides of the world Sir Brian Barratt Boyes in Auckland New Zealand and Mr Donald Ross in London undertook to use allografts for the replacement of diseased aortic valves Since that time the global interest in allografts has been patchy episodic and without a consensus Nonetheless for the last 20 years at least three groups in the world have steadfastly pursued the development of new and relevant information concerning the use of allograft valves in humans These are the centres of Sir Brian Barratt Boyes Mr Donald Ross and Mark O'Brien in Brisbane More recently talented investigators including Drs Yankah Yacoub and others have been developing information concerning the immunological aspects of the use of allografts as well as their clinical use No doubt at present cardiac valve allografts of one sort or another are the devices of choice for conduits and have an important place in the surgery of aortic valve replacement Even so in the mind of this writer at least the future usefulness of allografts for the replacement of diseased cardiac valves and conduits between a ventricle and the pulmonary artery remains problematic and depends upon improvements in other devices for this purpose and upon improvements that may be made in preparing and using allografts Sternberg's Diagnostic Surgical Pathology Stephen S.
