

Chapter 4 Immunity

Group Members: Valerie Aquije, Teresa Coppola, Juliana Fermin, Kelsey Lamelza, Sylvia Mischel, Jess Philipp, Neal Stephens

C.J., a 19-year-old, has a history of being allergic to bee stings, which seems to get worse during the summer months. After a weekend camping trip, she developed difficulty breathing and needed to seek care for these symptoms, which were diagnosed as anaphylaxis. Think about which clinical model is most related to this process. From your reading related to inflammation and immune function, Answer the following questions:

(Write down your source and page number for your answers so you can use it as a study guide.)

1. What anatomic problem would most likely lead to difficulty breathing as a consequence of an allergy? (Juliana)

When a patient experiences anaphylaxis, there are usually feelings of chest tightness, wheezing, shortness of breath, and labored breathing. These are a result of bronchospasms/bronchoconstriction (narrowing of the bronchioles) due to vascular shock. Difficulty breathing can also be attributed to swelling and inflammation of the tongue and throat. (Braun, Anderson p.82)

2 How would the immune system respond? (Teresa)

When the allergen (possibly from a bee sting) is first introduced into the body, the antigens from the allergen are recognized by the antibody (IgE). IgE then binds to mast cells on the skin which causes the degranulation of the mast cells. Following degranulation, mast cells release histamine and leukotrienes which are responsible for vasodilation and bronchoconstriction respectively. The histamine-mediated vasodilation and increased vascular permeability cause increased blood flow/inflammation. (Braun, Anderson pg. 82)

3. Why is this a chronic problem? (Kelsey)

A chronic inflammatory response is an altered inflammatory response due to unrelenting injury whereas an acute inflammatory response is an expected body response to injury. Based on this it is clear that anaphylaxis is a chronic response because having difficulty breathing is not an expected response to a bee sting. This is also considered a chronic response because there is a recurrent state of inflammation that lasts several weeks or longer. If this were an acute problem it would clear up within a few weeks, but since she has a history of being allergic to bee stings, we can classify her anaphylaxis as a chronic problem (Braun, 34, 48).

Pathophysiology Case Studies:

Pathophysiology Case Studies Hon-Vu Q. Duong, Nina Marcellus, 2021-06-30 Pathophysiology Case Studies is designed to expose nursing students to disease processes in the format of clinical scenarios and essentially to allow them to apply what they have learned. It is designed to be thought provoking. In order to answer the questions the students will have to use not only the available resources i.e. textbooks but also outside sources. The goal is to ignite the process of analytical thinking or logical processing of the information given to solve the problem and come to a reasonable and logical conclusion i.e. a diagnosis or differential diagnosis. It is intended to incorporate the materials learned in class into the clinical application. All the case studies are drawn from professional experiences from the authors. Clinical vignettes are written in a format like the questions that will be asked on standardized exams. It is also a means to introduce the students to a coherent method of presenting a patient's history and physical findings. The workbook is designed to be inclusive but also acknowledge the diversity of students with respect to interests and academic professional backgrounds. This workbook is flexible in that it can be used as an adjunct to the lectures, a mechanism to reinforce the lectured materials in the form of homework, a means to foster group dynamics by assigning case studies to groups of students where they will ultimately have to defend their conclusions, and a mechanism to enhance the students' knowledge base in understanding a disease. We also want to make it a little fun by incorporating crossword puzzle and concept maps. In the end, we hope this workbook will serve as a foundation to future nursing courses.

100 Case Studies in Pathophysiology Harold Joseph Bruyere, 2008-10-01 100 Case Studies in Pathophysiology provides students beginning their formal education in the health sciences with a resource they can use to begin to develop their clinical problem solving and critical thinking skills. This workbook provides a straightforward approach to integrating basic pathophysiology, risk factors, physical examination findings, and clinical laboratory data for 100 significant health problems in the United States today.
