Point-of-care testing Peter Lippa,Ralf Junker,2018-07-18 The underlying technology and the range of test parameters available are evolving rapidly The primary advantage of POCT is the convenience of performing the test close to the patient and the speed at which test results can be obtained compared to sending a sample to a laboratory and waiting for results to be returned Thus a series of clinical applications are possible that can shorten the time for clinical decision making about additional testing or therapy as delays are no longer caused by

preparation of clinical samples transport and central laboratory analysis Tests in a POC format can now be found for many medical disciplines including endocrinology diabetes cardiology nephrology critical care fertility hematology coagulation infectious disease and microbiology and general health screening Point of care testing POCT enables health care personnel to perform clinical laboratory testing near the patient The idea of conventional and POCT laboratory services presiding within a hospital seems contradictory yet they are in fact complementary together POCT and central laboratory are important for the optimal functioning of diagnostic processes They complement each other provided that a dedicated POCT coordination integrates the quality assurance of POCT into the overall quality management system of the central laboratory The motivation of the third edition of the POCT book from Lippa Junker which is now also available in English is to explore and describe clinically relevant analytical techniques organizational concepts for application and future perspectives of POCT From descriptions of the opportunities that POCT can provide to the limitations that clinician s must be cautioned about this book provides an overview of the many aspects that challenge those who choose to implement POCT Technologies clinical applications networking issues and quality regulations are described as well as a survey of future technologies that are on the future horizon The editors have spent considerable efforts to update the book in general and to highlight the latest developments e g novel POCT applications of nucleic acid testing for the rapid identification of infectious agents Of particular note is also that a cross country comparison of POCT quality rules is being described by a team of international experts in this field

Laboratory Data and Patient Care P. Kerkhof, 2012-12-06 The best conferences are often those where the participants are from a mixture of different disciplines. There is a cross fertilization of ideas and a wider perspective of common problems. The 6th International Meeting on Clinical Laboratory Organization and Management held in Noordwijkerhout, The Netherlands on 24th-28th June 1987 lived up to its promise of a stimulating program and differing views from a wide range of international participants. The theme of the conference was Laboratory Data and Patient Care and this provided a forum for discussion of many aspects of laboratory input into the diagnosis and monitoring of disease. The titles of the papers in this book of the proceedings will give some indication of the breadth of topics discussed, ranging from problems of laboratory management and professional leadership to educating the clinician in the most cost effective testing strategies and computer aided diagnosis to the best presentation of data and graphical displays. The backgrounds of the participants were equally wide ranging from medical statisticians and computer experts to practising clinicians and heads of clinical laboratories. There was also a significant number of delegates from commercial companies who were able to inject a different perspective on many problems. This blend of backgrounds and disciplines promoted much discussion and new avenues for research and development.
