Committee on Finance,2013 *The Frail Surgical Patient* Virginia Boccardi,Luigi Marano,2025-01-27 This book explores the transdisciplinary approach to general surgery for the frail patient promoting the use of a geriatric model of care in general surgical settings and thus proposing a gerosurgery approach in frail persons beyond chronological age Aging frailty and surgical needs are increasing dramatically worldwide while surgeons are daily facing with the trouble of the trade off between short term outcomes and efficacy of surgery in older persons However recent studies have clearly shown that age itself is not a prognostic risk factor for complications after elective surgery in older patients whereas cognitive or functional frailty is Neither a referring physician nor an assessing surgeon should deny patients surgery purely based on chronological age Instead decisions should be based on a CGA comprehensive geriatric assessment with a precise picture of the patient considering the cognitive functional nutritional socioeconomic and affective status Recent studies examining the use of preoperative CGA in surgical patients showed encouraging results on postoperative outcomes in old and or frail patients The most compelling current evidence comes from the orthopaedic community which has embraced the idea of multidisciplinary team care Preoperative evaluation postoperative care pain control nutritional support delirium prevention mobilization and rehabilitation are necessary also in general surgery An expert multidisciplinary team including geriatricians
