## **Patient Encounters The Experience Of Disease:**

**Patient Encounters** James H. Buchanan, 1989      Patient Encounters James H. Buchanan, 1989-01-01      **Medical Encounters** Alan G. Davis, Gordon Horobin, 1977      **Nursing and The Experience of Illness** Irena Madjar, Jo Ann Walton, 2005-08-12 This accessible introduction to phenomenology for nurses explains what has become one of the most widely used qualitative research methods within healthcare      *The Meaning of Illness* S. Kay Toombs, 2013-11-11 A PHENOMENOLOGICAL APPROACH My interest in exploring the nature of the patient's and the physician's understanding of illness has grown out of my own experience as a multiple sclerosis patient In discussing my illness with physicians it has often seemed to me that we have been somehow talking at cross purposes discussing different things never quite reaching one another This inability to communicate does not for the most part result from inattentiveness or insensitivity but from a fundamental disagreement about the nature of illness Rather than representing a shared reality between us illness represents two quite distinct realities the meaning of one being significantly and distinctively different from the meaning of the other In this work I shall suggest that psychological phenomenology provides the means to examine the nature of this fundamental disagreement between physician and patient in a rigorous fashion In particular psychological phenomenology discloses the manner in which the of his or her experience individual constitutes the meaning In providing a phenomenological description 2 the phenomenologist is committed to the effort to begin with what is given in immediate experience to turn to the essential features of what presents itself as it presents itself to consciousness and thereby to clarify the constitutive activity of consciousness and the sense structure of experiencing      The Handbook of English for Specific Purposes Brian Paltridge, Sue Starfield, 2014-09-15 Featuring a collection of newly commissioned essays edited by two leading scholars this Handbook surveys the key research findings in the field of English for Specific Purposes ESP Provides a state of the art overview of the origins and evolution current research and future directions in ESP Features newly commissioned contributions from a global team of leading scholars Explores the history of ESP and current areas of research including speaking reading writing technology and business legal and medical English Considers perspectives on ESP research such as genre intercultural rhetoric multimodality English as a lingua franca and ethnography      **Macleod's Clinical Examination** J. Alastair Innes, Anna R Dover, Karen Fairhurst, 2018-03-09 This classic textbook aims to assist clinicians develop the consultation skills required to elicit a clear history and the practical skills needed to detect clinical signs of disease Where possible the physical basis of clinical signs is explained to aid understanding Formulation of a differential diagnosis from the information gained is introduced and the logical initial investigations are included for each system The first part of the book addresses the general principles of good interaction with patients from the basics of taking a history and examining to the use of pattern recognition to identify spot diagnoses The second part documents the relevant history examination and investigations for all the major body systems The third part illustrates the application of these skills

to specific clinical situations The final part covers preparation for assessments of clinical skills and the use of these skills in everyday practice The book has accompanying videos demonstrating many of the key clinical examination routines as set out in the book A new editorial team has undertaken a substantial review of the book's contents and with the help of many new authors has radically revised the order and approach of the text Several new chapters have been created including a chapter on patients with mental disorders a chapter covering the approach to a deteriorating patient a chapter on assessment of patients towards the end of life and two new chapters on applying the key clinical skills during assessments and in practice The structure of the text has been rationalised with careful use of boxes tables and figures to set out the concepts for maximum clarity

**Fifty Years of Findings from the Jefferson Longitudinal Study of Medical Education** Joseph S. Gonnella, Clara A. Callahan, J. Jon Veloski, Jennifer DeSantis, Mohammadreza Hojat, 2022-01-01 This book assembles research findings accumulated over the span of half a century from the Jefferson Longitudinal Study JLS This study initiated in 1970 is the most comprehensive extensive and uninterrupted longitudinal study of medical students and graduates maintained in a single medical school The study was based on the conviction that medical schools have a social responsibility and ethical obligation to monitor the quality of their educational programs to assess their educational outcomes and to ensure that their educational goals have been achieved for the purposes of public safety The JLS has resulted in a large number of publications in professional peer reviewed journals and presentations in national and international meetings Some medical schools have expressed interest in learning more about the JLS requesting copies of the instruments we used in the study information about how to set up a longitudinal study of medical education and other needed resources In response to a request from Academic Medicine 2011 86 3 p 404 we prepared and published in that journal a schematic snapshot of the JLS for those interested in a model for the development of a longitudinal study of medical students and graduates The JLS is well known to the medical education research communities A recent Google search using keywords Jefferson Longitudinal Study resulted in 1 550 000 hits an indication of its broad popularity among researchers At the present time the JLS database contains academic information assessments and educational and career outcomes for 13 343 medical students and graduates of Sidney Kimmel formerly Jefferson Medical College of Thomas Jefferson University There are presently 502 variables in the JLS analytic database This book presents a collection of 207 abstracts of major publications from peerreviewed journals books and book chapters in which data and information from the JLS were used In this book we classified the abstracts based on their primary contents into the following categories Admissions of the Applicants to Medical School e g standardized tests academic preparation other admission variables Demographic Composition e g gender age race ethnicity Performance Evaluations in Medical School e g preclinical and clinical phases Postgraduate and Career e g assessment of clinical competence in residency training career choice specialization professional activities Psychosocial Attributes e g personal qualities indicators of physical and mental well being Professionalism e g assessment of elements of professionalism in

medicine such as clinical empathy attitudes toward interprofessional collaboration and orientation      *The Woman Patient* Malkah Notman,2012-12-06 This volume continues some of the issues raised in Volume 2 and focuses more closely on therapeutic intervention The theoretical discussion of aggression provides a background for the presentation of patterns of aggression and violence affecting women as well as possible connections between physical and emotional symptoms and indirect expressions of aggression The section on aggression against and by women is an extension of some of the content of *The Woman Patient* Volume 1 e g the chapter on rape Theoretical and clinical views that are not often linked in this fashion are included here because we are interested in understanding the development of a self concept that incorporates the constructive aspects of aggression as well as an understanding of violence In this context loss abandonment delinquency and child and adolescent suicide are also extensions of these issues The chapters that follow address aspects of symptom formation and concepts of illness There is as yet no definitive explanation for why women experience certain illness patterns more or less than men Current considerations have been reviewed but these do not answer They are a beginning on which we must build It is apparent that any discussion of these subjects better elucidates the complexity if it includes an intermingling of general problems with concrete symptoms Those specific problems that are usually thought of as psychological such as depression and behaviors such as substance abuse provide a focus for understanding wider issues
