Stabin, 2016-10-14 Written by one of the world's leading experts in the field of nuclear medicine dosimetry this text describes in detail the use of internal dose calculations in the practice of nuclear medicine While radiation therapy with external sources of radiation always employs calculations of dose to optimize therapy for each patient this is not routinely conducted in nuclear medicine therapy As the trend towards an increasing role of dosimetry in therapy planning increases this book reviews the available methods and technologies available to make this a more common practice The book begins by covering the mathematical fundamentals of internal dose calculations and uses sample calculations to demonstrate key principles The book then moves forward to describe anthropomorphic models dosimetric models and types and uses of diagnostic and therapeutic radiopharmaceuticals The depth of coverage makes it useful reference and guide for researchers performing dose calculations and for physicians considering incorporating dose calculations into the treatment of their cancer patients **Safety Science Abstracts Journal** , 1981 Tracking Radiation Exposure from Medical Diagnostic Procedures National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Tracking Radiation Doses from Medical Diagnostic Procedures, 2012-07-12 The growing use of medical diagnostic procedures is correlated with tremendous and undeniable benefits in the care of most patients However it is accompanied by growing concerns about the risks associated with diagnostic computed tomography and other procedures that utilize ionizing radiation A number of initiatives in radiation safety in medicine have taken place in the United States and internationally each serving different purposes Their ultimate goals are to provide higher quality clinical management of the patient and to ensure that reasonable steps are taken to keep the exposures as low as possible without compromising diagnostic efficacy Tracking Radiation Exposure from Medical Diagnostic Procedures Workshop Reports provides a summary of the presentations and discussions that took place during the December 8-9 2011 workshop titled Tracking Radiation Exposure from Medical Diagnostic Procedures This workshop was organized by the Nuclear and Radiation Studies Board of the National Academy of Sciences and sponsored by the Centers for Disease Control and Prevention the U S Food and Drug Administration and the U S Department of Health and Human Services This workshop report was authored by a six member committee of experts appointed by the National Academy of Sciences This committee brought together public health regulators physicians manufacturers researchers and patients to explore why what and how to track exposure from medical diagnostic procedures and possible next steps **Bulletin of the Atomic Scientists** , 1971-09 The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security Founded by

However, it is accompanied by growing concerns about the risks associated with diagnostic computed tomography and other procedures that utilize ionizing radiation. A number of initiatives in radiation safety in medicine have taken place in the United States and internationally, each serving different purposes. Their ultimate goals are to provide higher quality clinical management of the patient and to ensure that reasonable steps are taken to keep the exposures as low as possible without compromising diagnostic efficacy. Tracking Radiation Exposure from Medical Diagnostic Procedures Workshop Reports provides a summary of the presentations and discussions that took place during the December 8-9, 2011 workshop titled Tracking Radiation Exposure from Medical Diagnostic Procedures. This workshop was organized by the Nuclear and Radiation Studies Board of the National Academy of Sciences and sponsored by the Centers for Disease Control and Prevention, the U.S. Food and Drug Administration, and the U.S. Department of Health and Human Services. This workshop report was authored by a six-member committee of experts appointed by the National Academy of Sciences. This committee brought together public health regulators, physicians, manufacturers, researchers, and patients to explore why, what, and how to track exposure from medical diagnostic procedures and possible next steps.

Quality Control and Radiation Protection of the Patient in Diagnostic Radiology and Nuclear Medicine G. Contento, 1995 *Radiation Protection of the Patient in Nuclear Medicine* Walter A. Langmead, 1983 Relative Effective Dose Risk Based on Medical Diagnostic Modalities at the Nebraska Medical Center Michael D. Petrocchi, 2011 The use of medical diagnostic imaging involving ionizing radiation has drastically increased in recent years, causing concern about possible long-term consequences such as the induction of cancer. Recognizing this recent trend, the Institutional Review Board (IRB) at the Nebraska Medical Center commissioned this study in order to determine effective doses and corresponding lifetime attributable risk of cancer for all diagnostic scans involving ionizing radiation at its facility. The eventual product will be an on-line dose calculator specific only to the Nebraska Medical Center's scanning protocols to be utilized by its physicians, researchers, and patients for education and informed consent policies. In all, 32 conventional X-ray scans, 39 nuclear medicine scans, and over 100 individual Computed Tomography scans were analyzed to determine effective doses using the most current dosimetry data and computer software available at the time of this study. The Biological Effects of Ionizing Radiation (BEIR VII) methodology was then applied for each nuclear medicine and CT scan's effective dose to estimate the Lifetime Attributable Risk (LAR) of developing cancer based on age and gender. Comparisons of effective doses were also made between similar diagnostic scans from Duke University Radiation Dose Assessment Resource (RADAR) and www.xrayrisk.com.

Conventional X ray effective dose outcomes showed that there was no definitively higher rate of radiation dose between institutions Nuclear medicine effective doses varied considerably depending on the amount of radiopharmaceutical administered and source of dosimetry information acquired The computed tomography effective doses from the Nebraska Medical Center had higher values for scan regions that included the torso region with all other scans yielding similar effective doses Determining medical diagnostic radiation doses can be an intricate complex method It is pertinent that each institution wanting an accurate effective dose from their diagnostic scans base their calculations on individual scanning parameters and the most current radiation dosimetry information **Government Reports Annual Index** ,1988

Reference Doses and Quality in Medical Imaging B. Bauer,1998 Nuclear Medicine Radiation Dosimetry Brian J McParland,2010-07-03 Complexities of the requirements for accurate radiation dosimetry evaluation in both diagnostic and therapeutic nuclear medicine including PET have grown over the past decade This is due primarily to four factors Growing consideration of accurate patient specific treatment planning for radionuclide therapy as a means of improving the therapeutic benefit development of more realistic anthropomorphic phantoms and their use in estimating radiation transport and dosimetry in patients Design and use of advanced Monte Carlo algorithms in calculating the above mentioned radiation transport and dosimetry which require the user to have a thorough understanding of the theoretical principles used in such algorithms their appropriateness and their limitations increasing regulatory scrutiny of the radiation dose burden borne by nuclear medicine patients in the clinic and in the development of new radiopharmaceuticals thus requiring more accurate and robust dosimetry evaluations An element common to all four factors is the need for precise radiation dosimetry in nuclear medicine which is fundamental to the therapeutic success of a patient undergoing radionuclide therapy and to the safety of the patients undergoing diagnostic nuclear medicine and PET procedures As the complexity of internal radiation dosimetry applied to diagnostic and therapeutic nuclear medicine increases this book will provide the theoretical foundations for enabling the practising nuclear medicine physicist to understand the dosimetry calculations being used and their limitations allowing the research nuclear medicine physicist to critically examine the internal radiation dosimetry algorithms available and under development and providing the developers of Monte Carlo codes for the transport of radiation resulting from internal radioactive sources with the only comprehensive and definitive *Fundamentals of Radiation Dosimetry* J.R Greening,2017-12-14 This book reviews ionising radiation quantities and the relationships between them and discusses the
