Stock Exchange Trading Using Grid Pattern Optimized by A Genetic Algorithm with Speciation Tiago Martins, Rui Neves, 2021-07-08 This book presents a genetic algorithm that optimizes a grid template pattern detector to find the best point to trade in the SP 500 The pattern detector is based on a template using a grid of weights with a fixed size The template takes in consideration not only the closing price but also the open high and low values of the price during the period under testing in contrast to the traditional methods of analysing only the closing price Each cell of the grid encompasses a score and these are optimized by an evolutionary genetic algorithm that takes genetic diversity into consideration through a speciation routine giving time for each individual of the population to be optimized within its own niche With this method the system is able to present better results and improves the results compared with other template approaches The tests considered real data from the stock market and against state of the art solutions namely the ones using a grid of weights which does not have a fixed size and non speciated approaches During the testing period the presented solution had a return of 21.3% compared to 10.9% of the existing approaches The use of speciation was able to increase the returns of some results as genetic diversity was taken into consideration

Cultures of Expertise in Global Currency Markets Leon Wansleben,2013-07-18 Notwithstanding financial crises global foreign exchange markets have undergone a tremendous growth during the last two decades Foreign exchange FX is often thought of as a site where economic actors exchange currencies for buying foreign goods or selling goods in foreign countries but the FX markets are better understood as financial spheres dominated by speculative actors A key question is how this huge global speculative sphere has developed and what maintains it Thus far global currency markets have been largely neglected by the new approaches to finance and until now no study has existed to chart the interplay of their structural evolution and their shape as knowledge spheres This new book offers a systematic study of FX markets from a knowledge sociological perspective empirically focussing on analysts within these markets It makes the argument that market structures are reflected in and become stabilised by distinct cultures of financial expertise These cultures connect the actions and perceptions of loosely coupled globally distributed market players and establish shared sets of strategies of how to observe value and invest This highly original book will be of interest to scholars of economics sociology and political science and in particular to all those with an interest in the sociology of finance and the role of finance in the contemporary world
