Progress in Pattern Recognition, Image Analysis and Applications Alberto Sanfeliu, José F. Martínez Trinidad, Jesús A. Carrasco Ochoa, 2004-11-18 First of all we want to congratulate two new research communities from Mexico and Brazil that have recently joined the Iberoamerican community and the International Association for Pattern Recognition We believe that the series of congresses that started as the Taller Iberoamericano de Reconocimiento de Patrones TIARP and later became the Iberoamerican Congress on Pattern Recognition CIARP has contributed to these group consolidation efforts We hope that in the near future all the Iberoamerican countries will have their own groups and associations to promote our areas of interest and that these congresses will serve as the forum for scientific research exchange sharing of expertise and new knowledge and establishing contacts that improve cooperation between research groups in pattern recognition and related areas CIARP 2004 9th Iberoamerican Congress on Pattern Recognition was the

ninth in a series of pioneering congresses on pattern recognition in the Iberoamerican community As in the previous year CIARP 2004 also included worldwide participation It took place in Puebla Mexico The aim of the congress was to promote and disseminate ongoing research and mathematical methods for pattern recognition image analysis and applications in such diverse areas as computer vision robotics industry health entertainment space exploration telecommunications data mining document analysis and natural language processing and recognition to name a few [Pattern Recognition and Image Analysis](#)

Suri, 2011-05-04 With the advances in image guided surgery for cancer treatment the role of image segmentation and registration has become very critical The central engine of any image guided surgery product is its ability to quantify the organ or segment the organ whether it is a magnetic resonance imaging MRI and computed tomography CT X ray PET SPECT Ultrasound and Molecular imaging modality Sophisticated segmentation algorithms can help the physicians delineate better the anatomical structures present in the input images enhance the accuracy of medical diagnosis and facilitate the best treatment planning system designs The focus of this book is towards the state of the art techniques in the area of image segmentation and registration Pattern Recognition Adam Herout, 2010-02-01 Pattern

recognition is a very wide research field It involves factors as diverse as sensors feature extraction pattern classification decision fusion applications and others The signals processed are commonly one two or three dimensional the processing is done in real time or takes hours and days some systems look for one narrow object class others search huge databases for entries with at least a small amount of similarity No single person can claim expertise across the whole field which develops rapidly updates its paradigms and comprehends several philosophical approaches This book reflects this diversity by presenting a selection of recent developments within the area of pattern recognition and related fields It covers theoretical advances in classification and feature extraction as well as application oriented works Authors of these 25 works present and advocate recent achievements of their research related to the field of pattern recognition
