Activity Patterns in Small Mammals S. Halle, N.C. Stenseth, 2012-12-06 Environmental conditions change considerably in the course of 24 h with respect to abiotic factors and intra and interspecific interactions. These changes result in limited time windows of opportunity for animal activities and hence the question of when to do what is subject to fitness maximisation. This volume gives a current overview of theoretical considerations and empirical findings of activity patterns in small mammals, a group in which the energetic and ecological constraints are particularly severe and the diversity of activity patterns is particularly high. Following a comparative ecological approach for the first time, activity timing is consequently treated in terms of behavioural and evolutionary ecology, providing the conceptual framework for chronoecology as a new subdiscipline within behavioural ecology. An extensive Appendix gives an introduction to methods of activity modelling and to tools for statistical pattern analysis.

Variation Benedikt Hallgrímsson, Brian K. Hall, 2011-05-04 Darwin's theory of evolution by natural selection was based on the observation that there is variation between individuals within the same species. This fundamental observation is a central concept in evolutionary biology. However, variation is only rarely treated directly. It has remained peripheral to the study of mechanisms of evolutionary change. The explosion of knowledge in genetics, developmental biology, and the ongoing synthesis of evolutionary and developmental biology has made it possible for us to study the factors that limit, enhance, or structure variation at the level of an animal's physical appearance and behavior. Knowledge of the significance of variability is crucial to this emerging synthesis. Variation situates the role of variability within this broad framework, bringing variation back to the center of the evolutionary stage. Provides an overview of current thinking on variation in evolutionary biology, functional morphology, and evolutionary developmental biology. Written by a team of leading scholars specializing on the study of variation. Reviews of statistical analysis of variation by leading authorities. Key chapters focus on the role of the study of phenotypic variation for evolutionary developmental and post-genomic biology.

A Desert Calling Michael A. Mares, 2009-07-01 For most of us, the word desert conjures up images of barren wasteland, vast dry stretches inimical to life. But for a great array of creatures, the desert is a haven and a home. Travel with Mares into the deserts of Argentina, Iran, Egypt, and the American Southwest to encounter a rich and memorable variety of small, tenacious animals.

Current Mammalogy H.H. Genoways, 2013-06-29 When I first proposed a series entitled *Current Mammalogy* to the publishers, they were reluctant to undertake such a project because they viewed the field of mammalogy as overly fragmented. At first I found this idea to be difficult to accept; however, upon reflection, I came near to agreeing with it. Although many of us work on mammals, we generally feel more allegiance to our specialties such as systematics, genetics, cytogenetics, ecology, behavior, pest control, paleontology, wildlife management, primatology, and marine

mammalogy than we do to the general field of mammalogy However rather than becoming discouraged from pursuing this project I became more certain than ever that a series such as Current Mammalogy was needed We hope to make this series a place where specialists can present their ideas not only to other members of their specialty but to those outside the area as well Hopefully this exchange of ideas will be a mutually beneficial exercise The Editorial Board of Current Mammalogy has decided to keep the range of subjects in each volume as broad as possible rather than concentrating on one or two topics in the hope that this will keep the series as useful as possible to the broadest range of readers **The Great Basin Naturalist**

,1986 *Mammals of North America - Volume 2* Sergio Ticol Álvarez-Castañeda,2024-12-06 The second volume of this book series synthesizes nomenclature systematics and descriptions of North American mammal species Clear simple and illustrated identification keys are provided to make knowledge of mammals easier and facilitate the training both students and professionals in the field including readers without extensive experience Descriptions of the different species are provided up to Order highlighting the diagnostic features that allow identifying them promptly while the reader learns how to make subsequent identifications without having the book at hand Each species comes with potential distribution maps based on existing records in the main museums of North America The book includes the description characteristics and distribution maps of the 781 species with range in the North America subcontinent Wildlife Review ,1978 Wildlife Abstracts ,1976
