

Strategy 3: Common Argument Patterns

- This is the most important strategy if you want to go from *recognizing* an argument to *analyzing/paraphrasing* it.
- General idea:
 - There are five very common, deductively valid argument patterns.
 - If a passage fits one of these patterns, then you know/recognize that the passage contains an argument.

Prototypical Argumentative Patterns Frans H. van Eemeren,2017-08-14 Prototypical Argumentative Patterns reports about a research project started at the University of Amsterdam in 2012 In this project distinctive argumentative patterns have been identified in argumentative discourse in the political the legal and the medical domain These patterns consist of constellations of argumentative moves in which in order to deal with a particular kind of difference of opinion in defence of a particular type of standpoint a particular argument scheme or combination of argument schemes is used in a particular kind of argumentation structure The composition of these prototypical argumentative patterns can be explained by referring to the institutional characteristics of the communicative activity types in which they occur By exploring the relationship between argumentative discourse and the institutional context Frans van Eemeren Bart Garssen Corina Andone Eveline Feteris and Francisca Snoeck Henkemans have provided a new and illuminating perspective on the context dependency of argumentative discourse Sentence Patterns in English and Hebrew Ron Kuzar,2012-10-30 Sentence Patterns in English and Hebrew offers an innovative perspective on sentential syntax in which sentence patterns are introduced as constructions within the general framework of Construction Grammar Drawing on naturally occurring data collected from the Internet the study challenges the prevailing view of predication as the sole mechanism of sentence formation and introduces the idea of patterning as a complementary sometimes even alternative mechanism Major sentence patterns of English and Hebrew are systematically presented targeting both their form and their function A contrastive analysis of the sentence patterns in these two languages results in postulating a typological group in which cognitive motivations are shown to account for both similarities and differences within the typology Sentence Patterns in English and Hebrew will appeal to scholars of constructional approaches cognitive linguistics typology syntax as well as anyone interested in English and Hebrew

context of legal justification in various legal systems and countries that have been important for the development of research of legal argumentation The book contains a discussion of influential theories that conceive the law and legal justification as argumentative activity From different disciplinary and theoretical angles it addresses such topics as the institutional characteristics of the law and the relation between general standards for moral discussions and legal standards such as the Rule of Law It discusses patterns of legal justification in the context of different types of problems in the application of the law and it describes rules for rational legal discussions The combination of the sound basis of the first edition and the discussions of new developments make this new edition an up to date and comprehensive survey of the various theoretical influences which have informed the study of legal argumentation It discusses salient backgrounds to this field as well as major approaches and trends in the contemporary research It surveys the relevant theoretical factors both from various continental law traditions and common law countries

Patterns of meaning in lexicography and lexicology Laura Giacomini, Valentina Piunno, 2024-12-16 The book takes its cue from the topics of PhrasaLex a workshop dedicated to phraseological approaches to learner s lexicography which took place for the second time in July 2021 and is connected to the lexicographic project PhraseBase Considering the great interest that studies on patterns of meaning have gained in lexicology and lexicography we not only delve into the more phraseological approach but broaden our horizon to include further approaches both established and new that have as their common thread the identification and analysis of patterns of meaning in their interaction with grammatical patterns In this way we present the commonalities of a complex innovative and partly interdisciplinary strand of research that currently involves disciplines such as theoretical and applied linguistics corpus linguistics and computational linguistics The book provides insights into different theoretical approaches examining the interface between lexis semantics and grammar by dealing with methodological advances and issues regarding corpus linguistics explorations and the lexicographic process A special focus is on the phraseological nature of language as well as on its implication for the design of learner s dictionaries

A Grammar of Lezgian Martin Haspelmath, 2011-09-27 The series builds an extensive collection of high quality descriptions of languages around the world Each volume offers a comprehensive grammatical description of a single language together with fully analyzed sample texts and if appropriate a word list and other relevant information which is available on the language in question There are no restrictions as to language family or area and although special attention is paid to hitherto undescribed languages new and valuable treatments of better known languages are also included No theoretical model is imposed on the authors the only criterion is a high standard of scientific quality

Systematic Approaches to Argument by Analogy Henrique Jales Ribeiro, 2014-07-09 The present volume assembles a relevant set of studies of argument by analogy which address this topic in a systematic fashion either from an essentially theoretical perspective or from the perspective of it being applied to different fields like politics linguistics literature law medicine science in general and philosophy All result from original research conducted by their

authors for this publication Thus broadly speaking this is an exception which we find worthy of occupying a special place in the sphere of the bibliography on the argument by analogy In effect most of the contexts of the publications on this topic focus on specific areas for example everyday discourse science or law theory while underestimating or sometimes even ignoring other interdisciplinary scopes as is the case of literature medicine or philosophy The idiosyncrasy of this volume is that the reader and the researcher may follow the development of different theoretical outlooks on argument by analogy while measuring the scope of its greater or lesser application to the aforementioned areas as a whole

Every Thing Must Go James Ladyman, Don Ross, 2007-07-05 Every Thing Must Go argues that the only kind of metaphysics that can contribute to objective knowledge is one based specifically on contemporary science as it really is and not on philosophers a priori intuitions common sense or simplifications of science In addition to showing how recent metaphysics has drifted away from connection with all other serious scholarly inquiry as a result of not heeding this restriction they demonstrate how to build a metaphysics compatible with current fundamental physics ontic structural realism which when combined with their metaphysics of the special sciences rainforest realism can be used to unify physics with the other sciences without reducing these sciences to physics itself Taking science metaphysically seriously Ladyman and Ross argue means that metaphysicians must abandon the picture of the world as composed of self subsistent individual objects and the paradigm of causation as the collision of such objects Everything Must Go also assesses the role of information theory and complex systems theory in attempts to explain the relationship between the special sciences and physics treading a middle road between the grand synthesis of thermodynamics and information and eliminativism about information The consequences of the author's metaphysical theory for central issues in the philosophy of science are explored including the implications for the realism vs empiricism debate the role of causation in scientific explanations the nature of causation and laws the status of abstract and virtual objects and the objective reality of natural kinds
