Patterns Of Primary Production In The Biosphere:

Patterns of Primary Production in the Biosphere Helmut Lieth, 1978 What is plant matter Measuring primary productivity Modeling productivity patterns Global production pattern *Primary Productivity of the Biosphere* H. Lieth, R.H. Whittaker, 2012-12-06 The period since World War II and especially the last decade influenced by the International Biological Program has seen enormous growth in research on the function of ecosystems The same period has seen an exponential rise in environmental problems including the capacity of the Earth to support man's population The concern extends to man's effects on the biosphere the film of living organisms on the Earth's surface that supports man The common theme of ecologic research and environmental concerns is primary production the binding of sunlight energy into organic matter by plants that supports all life Many results from the IBP remain to be synthesized but enough data are available from that program and other research to develop a convincing summary of the primary production of the biosphere the purpose of this book The book had its origin in the parallel interests of the two editors and Gene E Likens which led them to prepare a symposium on the topic at the Second Biological Congress of the American Institute of Biological Sciences in Miami Florida October 24 1971 Revisions of the papers presented at that symposium appear as Chapters 2 8 9 10 and 15 in this book We have added other chapters that complement this core these include discussion and evaluation of methods for measuring productivity and regional production current findings on tropical productivity and models of primary productivity

Successes, Limitations, and Frontiers in Ecosystem Science Michael L. Pace, Peter M. Groffman, 2013-12-01 Research on the ecosystems has emerged in recent decades as a vital successful and sometimes controversial approach to environmental science Ecosystem science has addressed issues such as human alteration of biogeochemical cycles ecological complexity and biodiversity and ecological response to climate change As a central and integrating science ecosystem level studies have been highly successful This book emphasizes the idea that much of the progress in ecosystem research has been driven by the emergence of new environmental problems that could not be addressed by existing approaches By focusing on successes limitations and frontiers in ecosystem studies it will be welcomed by students and scientists throughout the ecological and environmental communities

Forests at the Land-atmosphere Interface J. Grace, J. Moncrieff, K. McNaughton, 2004 Annotation Forest ecosystems exist at the interface between the land and the atmosphere Understanding the properties of this planetary boundary layer is very important for a number of related disciplines This book presents an overview of topics that are of significance at this interface starting at the scale of intra leaf organelles ranging to higher levels of organisation such as communities and ecosystems It covers topics such as stomatal functioning large scale processes radiation modelling forest meteorology and carbon sequestration Based on proceedings of a conference to mark the retirement of Professor Paul Jarvis from the University of Edinburgh the book contains contributions from leading international scientists It will be of significant interest to researchers in forestry ecology environmental sciences and natural resources *Biological and*

Biodiversity in Drylands

Moshe Shachak, 2005 The first volume in the Long Term Ecological Research Network series this book summarizes the state of knowledge about biodiversity in drylands and seeks to identify questions and strategies for future research and to lay out guidelines for management of biodiversity in desert and semi desert regions

Fundamentals of Biogeography Richard J. Huggett, 1998 Fundamentals of Biogeography offers a fresh up-to-date introduction to biogeography explaining the ecology geography and history of animals and plants The book defines and examines populations communities and ecosystems examining where different animals and plants live and how they came to be living there investigating how populations grow interact and survive Stressing the role of ecological geographical historical and human factors in fashioning animal and plant distributions Huggett reveals how life has and is adapting to its biological and physical surroundings The book includes several sections on human attitudes to Nature differ and how biogeography can affect conservation practice As well as explaining key concepts and interactions Huggett tackles many topical and controversial environmental and ethical concerns including animal rights species exploitation habitat fragmentation biodiversity metapopulations patchy landscapes and chaos Illustrated throughout with informative diagrams and photos and including chapter summaries guides to further reading and an extensive glossary of key terms Fundamentals of Biogeography presents an engaging introduction for students

Methods in Ecosystem Science Osvaldo E. Sala, Robert B. Jackson, Harold A. Mooney, Robert

Howarth, 2000-08-11 Ecology at the ecosystem level has both necessitated and benefited from new methods and technologies as well as those adapted from other disciplines With the ascendancy of ecosystem science and management the need has arisen for a comprehensive treatment of techniques used in this rapidly growing field Methods in Ecosystem Science answers that need by synthesizing the advantages disadvantages and tradeoffs associated with the most commonly used techniques in both aquatic and terrestrial research The book is divided into sections addressing carbon and energy dynamics nutrient and water dynamics manipulative ecosystem experiments and tools to synthesize our understanding of ecosystems Detailed information about various methods will help researchers choose the most appropriate methods for their particular studies Prominent scientists discuss how tools from a variety of disciplines can be used in ecosystem science at different scales

The majority of carbon stored in the soils of the world is stored in forests The refractory nature of some portions of forest soil organic matter also provides the slow gradual release of organic nitrogen and phosphorus to sustain long term forest productivity Contemporary and future disturbances such as climatic warming deforestation short rotation silviculture the invasion of exotic species and fire all place strains on the integrity of this homeostatic system of C N and P cycling On the other hand the CO₂ fertilization effect may partially offset losses of soil organic matter but many have questioned the ability of N and P stocks to sustain the CO₂ fertilization effect Despite many advances in the understanding of C N and P cycling in forest soils many questions remain For example no complete inventory of the myriad structural formulae of soil organic N and P has ever been made The factors that cause the resistance of soil organic matter to mineralization are still hotly debated Is it possible to engineer forest soil organic matter so that it sequesters even more C The role of microbial species diversity in forest C N and P cycling is poorly understood The difficulty in measuring the contribution of roots to soil organic C N and P makes its contribution uncertain Finally global differences in climate soils and species make the extrapolation of any one important study difficult to extrapolate to forest soils worldwide
