Population Ecology A Unified Study Of An:

Population Ecology Michael Begon, Martin Mortimer, 1981 **Population Ecology** Michael Begon, Martin Mortimer, David J. Thompson, 2009-07-15 Worldwide Population Ecology is the leading textbook on this titled subject Written primarily for students it describes the present state of population ecology in terms that can be readily understood by undergraduates with little or no background in the subject Carefully chosen experimental examples illustrate each topic and studies of plants and animals are combined to show how fundamental principles can be derived that apply to both species Use of complex mathematics is avoided throughout the book and what math is necessary is dealt with by examination of real experimental data rather than dull theory The latest edition of this leading textbook Adopted as an Open University set text

Population Ecology Michael Begon, Martin Mortimer, 1983 *Population Ecology: a Unified Study of Animals and Plants* Begon Michael, Mortimer Martin, 1986 Theory of Wildlife Population Ecology Bruce D. Leopold, 2018-10-25 Understanding wildlife population ecology is vital for all wildlife managers and conservation biologists Leopold draws on 30 years of research and teaching experience to give students and natural resource professionals the foundation they need to effectively manage wildlife populations He begins with the key statistical concepts and research approaches necessary to gain insight into various models of population dynamics The many factors that influence wildlife populations are thoroughly explored and their consequences are investigated In addition the author presents techniques for analyzing wildlife harvest data and a lucid discussion of valuable wildlife census methods Frequent examples of foundational literature supplement each chapter with applications of the theories and provide a concise compendium of fundamental concepts of population ecology Abundant statistical exercises reinforce students learning throughout the text **Methods in Comparative Plant**

Population Ecology David Gibson, 2014-10-16 The field of plant population ecology has advanced considerably in the last decade since the first edition was published In particular there have been substantial and ongoing advances in statistics and modelling applications in population ecology as well as an explosion of new techniques reflecting the availability of new technologies e g affordable and accurate Global Positioning Systems and advances in molecular biology This new edition has been updated and revised with more recent examples replacing older ones where appropriate The book's trademark question driven approach has been maintained and some important topics such as the metapopulation concept which are missing entirely from the current edition are now included throughout the text *Introduction to Population Biology* Dick Neal, 2004 Provides a quantitative and Darwinian perspective on population biology with problem sets simulations and worked examples to aid the student Principles of Population Dynamics and Their Application Alan A. Berryman, 2020-11-25 This book provides an introduction to population dynamics exploring rules that govern change in any dynamic system and applying these general principles to populations of living organisms Principles of Population Dynamics and their Application is aimed at applied ecologists resource managers and pest managers It is also aimed at undergraduate students taking courses in

forestry fisheries wildlife and pest management *Animal Dispersal* N.C. Stenseth, W.Z. Lidicker, 2012-12-06 4 1 1

Demographic significance Confined populations grow more rapidly than populations from which dispersal is permitted Lidicker 1975 Krebs 1979 Tamarin et al 1984 and demography in island populations where dispersal is restricted differs greatly from nearby mainland populations Lidicker 1973 Tamarin 1977 1978 Gliwicz 1980 clearly demonstrating the demographic significance of dispersal The prevalence of dispersal in rapidly expanding populations is held to be the best evidence for presaturation dispersal Because dispersal reduces the growth rate of source populations it is generally believed that emigration is not balanced by immigration and that mortality of emigrants occurs as a result of movement into a sink of unfavourable habitat If such dispersal is age or sex biased the demography of the population is markedly affected as a consequence of differences in mortality in the dispersive sex or age class Habitat heterogeneity consequently underlies this interpretation of dispersal and its demographic consequences although the spatial variability of environments is rarely assessed in dispersal studies Cognitive Patterns in Science and Common Sense Theo A.F. Kuipers, Anne Ruth

Mackor, 2023-03-13 This collection of 17 articles offers an overview of the philosophical activities of a group of philosophers who have been working at the Groningen University The meta methodological assumption which unifies the research of this group holds that there is a way to do philosophy which is a middle course between abstract normative philosophy of science and descriptive social studies of science On the one hand it is argued with social studies of science that philosophy should take notice of what scientists actually do On the other hand however it is claimed that philosophy can and should aim to reveal cognitive patterns in the processes and products of scientific and common sense knowledge Since it is thought that those patterns can function as guidelines in new research and or in research in other disciplines philosophy can nevertheless hold on to the normative aim which is characteristic of classical philosophy of science Compared to this common assumption there is a diversity of subjects Some papers deal with general problems of science knowledge cognition and argumentation others with topics relating to foundational problems of particular sciences Therefore this volume is of interest to philosophers of science to philosophers of knowledge and argumentation in general to philosophers of mind as well as for scientists working in the physical and applied sciences biology psychology and economy who are interested in the foundations of their disciplines After a foreword by Leszek Nowak and a general introduction by the editors the book is divided into four parts with special introductions I Conceptual Analysis in Service of Various Research Programmes Henk Zandvoort Rein Vos Rick Looijen Gerben Stavenga René Dalitz II The Logic of the Evaluation of Arguments Hypotheses Default Rules and Interesting Theorems Erik Krabbe Theo Kuipers Alfons Keupink Maarten Janssen Yao Hua Tan Bert Hamminga III Three Challenges to the Truth Approximation Programme Sjoerd Zwart Hinne Hettema Theo Kuipers Roberto Festa IV Explicating Psychological Intuitions Anne Ruth Mackor Jeanne Peijnenburg Lex Guichard Michel ter Hark The Groningen research group was recently qualified by an official international assessment committee as one of the best philosophy research groups in the Netherlands

Conservation of Biological Resources E. J. Milner-Gulland, Ruth Mace, 2009-07-15 This book presents the issues surrounding the conservation of wildspecies and ecosystems used by people It is aimed at final year undergraduate and master s students taking courses in conservation environmental management ecological economics and related subjects as well as conservation professionals including managers policy makers and researchers The structure of the book is ideal for a course in conservation comprising a theoretical section written by the authors and a set of ten contributed case studies intentionally diverse in discipline geographical region and system of study The theoretical section provides the knowledge that is needed to understand the issues while the case studies can form the basis of seminars Readers will emerge with a clear recognition of the difficulties of limiting the harvesting of biological resources to sustainable levels and of the boundaries of sustainable use as a conservation tool The authors an ecologist and an anthropologist have both worked on the conservation and sustainable use of wildlife for several years including the ivory and rhino horn trades The first book to examine the issues underlying the sustainable use debate in a fully interdisciplinary manner Both the theoretical section and the case studies approach the issues using methods from economics ecology anthropology and other fields Designed as a course textbook combining a theoretical section with invited case studies written by expert practitioners in the field Outlines the new direction that conservation biology and thus conservation biologists must take if it is to be successful

The Epidemiology of Plant Diseases B.M. Cooke, D. Gareth Jones, B. Kaye, 2006-03-29 Plant disease epidemiology is a dynamic science that forms an essential part of the study of plant pathology This book brings together a team of 35 international experts Each chapter deals with an essential component of the subject and allows the reader to fully understand how each exerts its influence on the progress of pathogen populations in plant populations over a defined time scale This edition has new revised and updated chapters

Conserving Living Natural Resources Bertie J. Weddell, 2002-03-14 Essential reading for undergraduate students of conservation biology and living natural resource management

Principles of Ecotoxicology C.H. Walker, R.M. Sibly, D.B. Peakall, 2016-04-19 Cutting across traditional subject boundaries Principles of Ecotoxicology Fourth Edition gives readers an integrated view of ecotoxicology from molecules to ecosystems This new edition of a bestselling textbook continues to emphasize principles rather than practice providing the interdisciplinary perspective and grounding required for research

Handbook of Models for Human Aging P. Michael Conn, 2011-04-28 The Handbook of Models for Human Aging is designed as the only comprehensive work available that covers the diversity of aging models currently available For each animal model it presents key aspects of biology nutrition factors affecting life span methods of age determination use in research and disadvantages advantages of use Chapters on comparative models take a broad sweep of age related diseases from Alzheimer s to joint disease cataracts cancer and obesity In addition there is an historical overview and discussion of model availability key methods and ethical issues Utilizes a multidisciplinary approach Shows tricks and approaches not available in primary publications First volume of its kind to combine both methods of study

for human aging and animal models Over 200 illustrations Ecological Dynamics of Tick-Borne Zoonoses Daniel E. Sonenshine, Thomas N. Mather, 1994-10-20 The ecological relationships found to exist between tick vectors and pathogens in their zootic cycle can profoundly influence patterns of transmission and disease for humans and domestic animals This book examines the ecological parameters affecting the conservation and regulation of tick borne zoonoses as well as the geographic and seasonal distributions of those infections Written by an eminent authority on the subject the book will be sought after by students and researchers in ecology invertebrate zoology parasitology entomology public health and epidemiology C. H. Walker, R. M. Sibly, S. P. Hopkin, D. B. Peakall, Cutting across traditional subject boundaries Principles of Ecotoxicology Fourth Edition gives readers an integrated view of ecotoxicology from molecules to ecosystems This new edition of a bestselling textbook continues to emphasize principles rather than practice providing the interdisciplinary perspective and grounding required for research Organized into three sections the book first describes the molecular structures properties and environmental fate of pollutants It then deals with the effects of pollutants on living organisms at the molecular cellular and individual levels Moving into population biology and population genetics the third part of the book addresses a question of great interest to ecologists What effects do pollutants have at the levels of population community and the whole ecosystem The book also looks at how ecotoxicology is used in the biomonitoring of environmental pollution the investigation of pollution problems the conducting of field trials the study of the development of resistance and the growing area of environmental risk assessments Throughout examples and case studies illustrate the principles This updated fourth edition includes new material on nanoparticle pollution bioaccumulation biomarkers and chemical warfare in nature as well as a new chapter on the future directions of ecotoxicology A concise textbook that will also appeal to practicing ecotoxicologists it provides a solid basis for understanding what happens to chemicals in the real world where they go how they ultimately degrade and how they affect the individuals and populations that encounter them What's New in This Edition Revised and updated material throughout A chapter on future directions of ecotoxicology New material on nanoparticle pollution and chemical warfare in nature Expanded coverage of bioaccumulation biomarkers and risk assessment for affected populations More case studies many from the United States Discussion of neurotoxic and behavioral effects of pollutants Recent research on the decline of vultures and effects of neonicotinoids on bees Organic Pollutants An Ecotoxicological Perspective Second Edition CRC Press 2008 a companion volume to this book covers the mechanistic aspects of ecotoxicology in more depth *Structure and Dynamics of Fungal Populations* J. Worrall, 2012-12-06 Fungi are among the most versatile and diverse groups of organisms in their morphology life cycles and ecology This has provided endless fascination and intrigue to those who have studied fungi but it has also made it difficult to understand fungal biology from the perspective of the broader fields of evolution ecology genetics and population biology That is changing Details of fungal biology have been elucidated at an exciting pace increasingly allowing us to understand fungi on the bases of general

biological principles Moreover many who study fungi have lately emulated some of the great mycologists and plant pathologists of the early years in applying an insight born of broad perspective This change has been particularly apparent in fungal population biology In this book many of those at the forefront of that change summarize integrate and comment on recent developments and ideas on populations of fungi By taking a broad perspective they show how new information on fungi may contribute to concepts and ideas of biology as a whole Just as important they contribute to further invigoration of fungal population research by illuminating mycology with new ideas and concepts derived in part from other biological fields

Insect Herbivore-Host Dynamics A. F. G. Dixon, 2005-02-03 Literature on the population dynamics of insect herbivores tends to favour a top down regulation of abundance owing much to the action of natural enemies Originally published in 2005 this volume challenges this paradigm and argues that tree dwelling species of aphids through competition for resources regulate their own abundance The biology of tree dwelling aphids is examined particularly their adaptation to the seasonal development of their host plants When host plant quality is favourable aphids by telescoping generations can achieve prodigious rates of increase which their natural enemies are unable to match Using analyses of long term population censuses and results of experiments this book introduces students and research workers to insect herbivore host dynamics using the interaction between aphids and trees as a model

Basic Biogeography N.V. Pears, 2014-06-06 First published in 1985 This is the second edition of a study looking at ecology and biogeography with updated chapters including current research It starts with the study of plants to gain an understanding of the complexities of ecological relationships
