Genetic Engineering, DNA, and Cloning Joseph Menditto,Debbie Kirsch,1983 Over 8000 entries to scholarly and popular journal articles books essays government documents and newspaper items published from 1970 to the present Major indexes and databases were consulted as sources Broad arrangement by form of literature and then by topic Each entry gives bibliographical information Author index Biography Of Paul Berg, A: The Recombinant Dna Controversy Revisited Errol C Friedberg,2014-06-17 With a Foreword by Sydney Brenner Nobel laureate in Physiology or Medicine 2002 This biography details the life of Paul Berg Emeritus Professor at Stanford University tracing Berg s life from birth in 1926 to the present with special emphasis on his enormous scientific contributions including being the first to develop technology that led to

gene cloning science In 1980 Berg received a Nobel Prize in chemistry for this work In addition to his contributions in the research laboratory Berg orchestrated and oversaw a historic meeting at Asilomar California that centered on a threatening controversy surrounding the perception by some of the harmful potential of recombinant DNA technology This meeting did much to forestall this controversy and to put in place the regulation of recombinant DNA work thus putting fears to rest The recombinant DNA controversy was a historic outcome of the discovery of gene cloning Notably it represented a paramount example of scientific foresight and due diligence by the scientific community rather than by regulatory entities in the United States and many other countries The ultimate acceptance of gene DNA cloning led to a new era of modern biology that thrives to the present This book is aimed primarily at scientists and those in training The book strives to simply provide information for the general reader but is not specifically tailored for a general reading audience While many books cover the recombinant DNA controversy none have satisfactorily addressed this historic period and are often contradictory about the many who s where s and why s involved Additionally the great majority of these were written by non scientists This biography of Paul Berg provides access to numerous archived letters and documents at Stanford University not previously addressed and to the chronology of events as recalled and documented by him as well as other key personalities many of whom were interviewed

Recombinant DNA John Richards,2012-12-02 Recombinant DNA Science Ethics and Politics emerged from papers presented at a conference Ethical and Methodological Dimensions of Scientific Research Recombinant DNA A Case Study held at the University of Georgia April 15 16 1977 Starting with an introduction to the methods and uses of recombinant DNA technology the remaining contributions made by researchers at the symposium are organized into four parts The first part contains papers on the development and utilization of recombinant DNA technology genetic engineering in agriculture and the dangers of unrestricted research The second part focuses on the ethical aspects of recombinant DNA research It includes studies such as ethical prerequisites for examining biological research the limitations of broad moral policies and ethical theories underlying the recombinant DNA controversy The third part examines the legal aspects of recombinant DNA research and examines the issue of whether such research should be regulated The papers in the fourth part consider directions for future research

Nature Remade Luis A. Campos,Michael R. Dietrich,Tiago Saraiva,Christian C. Young,2021-07-16 In this fourth volume in our Convening Science series with the Marine Biological Laboratory contributors including historians biologists and philosophers explore the development of bioengineering The essays show how engineering is both a means to a functional end and a method of learning about the world The book is organized around three themes controlling and reproducing knowing and making and envisioning to chart the increasing sophistication of our engineering of biological systems and to change our sense of the scales at which engineering occurs to include not just genetics but also ecosystem level intervention The volume will attempt to make the case for the centrality of engineering for understanding and imagining modern life
