Grodin Director, Leonard H. Glantz Associate Director and Professor of Health Law both at the Boston University Schools of Medicine and Public Health, 1994-02-08 Is using children as research subjects ever justified Are there limits to such use Does the fact that children are medically and psychosocially different from adults have implications for research What can we learn from the history of the use and abuse of children as research subjects Do parents have the authority to volunteer their children for research projects How should children participate in the decision to be involved in research How should research risks be assessed and balanced These perplexing questions and others are addressed by a distinguished group of experts in the field of biomedical and behavioral research with children This book adopts an integrated multidisciplinary approach which uses science ethics and law as guides for exploring these most difficult issues The tension between acquiring important new knowledge and fulfilling the obligation to protect children from exploitation and harm is a recurring theme As the first book to be devoted solely to the science ethics and law of research with children it is an indispensable resource to physicians psychologists educators lawyers ethicists Institutional Review Board members child advocates and others involved in performing or reviewing research with children *Research on Human Subjects* Bernard Barber, 2018-04-24 The use of human subjects in biomedical research has increased rapidly with scientific discoveries However the failure to achieve the highest or even adequate standards of professional moral concern and behavior is a serious side effect Research on Human Subjects is based on four years of intensive research in which two studies were completed one on a nationally representative sample of biomedical research institutions the second on a sample of 350 researchers who actually used human subjects The authors explore prevalent ethical norms the actual ethical behavior of scientists and the dilemma between the values of humane therapy and scientific discovery They document the inadequate training that biomedical researchers receive in the ethics of research on human subjects not only in medical schools but in post graduate training as well This landmark work makes very specific suggestions for policy change and reform for the biomedical research profession and its employment of human subjects **Protecting Human Research Subjects at the**

*Regulation* I. Glenn Cohen,Holly Fernandez Lynch,2014-07-11 Experts from different disciplines offer novel ideas for improving research oversight and protection of human subjects The current framework for the regulation of human subjects research emerged largely in reaction to the horrors of Nazi human experimentation revealed at the Nuremburg trials and the Tuskegee syphilis study conducted by U S government researchers from 1932 to 1972 This framework combining elements of paternalism with efforts to preserve individual autonomy has remained fundamentally unchanged for decades Yet as this book documents it has significant flaws including its potential to burden important research overprotect some subjects and inadequately protect others generate inconsistent results and lag behind developments in how research is conducted Invigorated by the U S government s first steps toward change in over twenty years Human Subjects Research Regulation brings together the leading thinkers in this field from ethics law medicine and public policy to discuss how to make the system better The result is a collection of novel ideas some incremental some radical for the future of research oversight and human subject protection After reviewing the history of U S research regulations the contributors consider such topics as risk based regulation research involving vulnerable populations including military personnel children and prisoners the relationships among subjects investigators sponsors and institutional review boards privacy especially regarding biospecimens and tissue banking and the possibility of fundamental paradigm shifts ContributorsAdam Braddock Alexander Morgan Capron Ellen Wright Clayton I Glenn Cohen Susan Cox Amy L Davis Hilary Eckert Barbara J Evans Nir Eyal Heidi Li Feldman Benjamin Fombonne Elisa A Hurley Ana S Iltis Gail H Javitt Greg Koski Nicole Lockhart Holly Fernandez Lynch Michael McDonald Michelle N Meyer Osagie K Obasogie Efthimios Parasidis Govind Persad Rosamond Rhodes Suzanne M Rivera Zachary M Schrag Seema K Shah Jeffrey Skopek Laura Stark Patrick Taylor Anne Townsend Carol Weil Brett A Williams Leslie E Wolf      **Ethics in Neurobiological Research with Human Subjects** Adil E.
