Environmental Challenges in Global Perspective Joseph G. Jabbar, O. P. Dwivedi, 1998 In our drive to improve human standards of living we have paradoxically paid scant attention to the need for clean air and water the impact of acid rain on agriculture lakes and rivers the effect of pollutants on the ozone layer the safe disposal of hazardous wastes and the relationship between population growth and the environment It seems that every time governments are faced with an apparent choice between economic development and the protection of the environment priority is always given to the former Short term plans dictated by canons of political survival and expediency always seem to take precedence over long term strategies with politicians and decision makers deftly relegating environmental concerns to the realm of rhetoric This book is an effort to better understand the problems faced by our global ecosystems It is also the result of the authors deep commitment to urge both citizens and their leaders the world over to work together for a better protection of the environment so that our planet may be saved for the present and for future generations Environment & Planning ,1975

Using Marginal Damages in Environmental Policy Nicholas Z. Muller, Robert O. Mendelsohn, 2012 America has struggled to strike the proper balance between environmental stewardship and economic well being when regulating air pollution Economics Professors Nicholas Muller and Robert Mendelsohn suggest a path breaking solution to this conundrum an original and efficient regulatory model that they contend would lead to both clearer air and millions in industry savings

Muller and Mendelsohn illustrate the shortcomings of current air pollution policy demonstrating how catch all solutions fail to distinguish between different regions where the costs of pollution damages vary widely The authors provide convincing evidence of these failures pollution in urban areas for example does more harm than it does in rural areas but those differences are not accounted for Muller and Mendelsohn lay out an innovative and prioritized roadmap to reform this outdated policy proposing that air pollution policy should account for the damage done by pollutants based on their location This path breaking system would enable policymakers to establish taxes or tradable permits that result in efficient outcomes that neither over value nor under value pollution damages At once a documentation of failures a record of successes and a convincing argument for change Using Marginal Damages in Environmental Policy contends that striking an acceptable balance between environmental and economic health is not an impossible task Provided by publisher **The Cost of Climate Policy** Mark Jaccard,John Nyboer,Bryn Sadownik,2002 Reducing greenhouse gas emissions is a major environmental challenge facing the world We all want to reduce the risks of global warming but how much will this cost What will it mean on a personal business or community level And what policy responses should we expect from our governments The Cost of Climate Policy sheds light on these pressing issues The authors look at the challenges of estimating the costs of greenhouse gas emission reduction to help readers understand how different definitions of costs and different assumptions about technological and economic evolution affect the estimates that are so hotly debated today Using Canada as their focal point the authors look specifically at the impact of emission reduction policies on energy prices technology options and lifestyle choices The book concludes with concrete proposals for overcoming the constraints of environmental policy making and the high initial costs of action Policy makers need to know as much as possible about the costs of taking action to reduce greenhouse gas emissions As indispensable as this book will be to policy analysts it is also an important primer for a wider range of readers interested in the economic implications of climate change **OECD Studies on Environmental Innovation Better Policies to Support Eco-innovation** OECD,2011-03-15 This report takes a pragmatic approach to policies that support the development and diffusion of eco innovation Building on the OECD Innovation Strategy it argues that eco innovation is not merely about technological developments non technical innovations matter as well
