Lactoferrin T. William Hutchens, Bo Lönnerdal, 2012-12-06 The number of investigators focusing their attention on lactoferrin has increased dramatically in recent years Lactoferrin is a protein with more than one known structure and a number of proposed biological functions including several with important regulatory consequences In many ways it has been an easy protein to investigate however there have been difficulties understanding specific structure function relationships particularly as it functions in vivo Research funding dedicated to this protein has previously been limited but is now increasing As lactoferrin begins to emerge formally as a protein of significance to the medical and industry it is more important than ever to coordinate professional and integrate research efforts whenever possible and to share the results of these efforts within the expanding array of medical and scientific disciplines involved It was our intention to provide a forum to summarize and disseminate the most recent advances in this field Included in Lactoferrin Interactions and Biological Functions are selected presentations representing the many disciplines involved in defining lactoferrin function in terms of its known structural features including its carbohydrate side chains receptor binding sites its capacity to bind different metal ions and other newly discovered bioactive domains Several of the possible physiological functions of lactoferrin are described and summarized in detail including the role of lactoferrin in bacterial killing its involvement in cell growth and proliferation in the modulation of immune function and in iron absorption

Nutrients in Cancer Prevention and Treatment
Kedar N. Prasad, Leonida Santamaria, R. Michael Williams, 2012-12-06 Nutrients in Cancer Prevention and Treatment contains articles that were presented by leading researchers and physicians in the field of nutritional oncology Most of the previous conference proceedings on Nutrition and Cancer have dealt primarily with the issue of the role of nutrients in cancer prevention This is logical because enormous quantities of laboratory and epidemiologic data have been published on the topic Nutrients in Cancer Prevention and Treatment also contains several studies on the role of diet and vitamins in cancer treatment There are very few books that have reviewed laboratory and clinical studies and the role of vitamins in cancer treatment There are preliminary data suggesting that daily supplementation with high doses of certain vitamins in combination with conventional therapeutic agents may enhance their growth inhibitory effects on tumor cells and may protect normal tissues against some of their toxic effects This book is unique in the sense that several articles have discussed the mechanisms of action of individual vitamins on cellular and molecular parameters It is very exciting to note that some of

the vitamins inhibit protein kinase C activity increase the production of certain growth factors and modulate the expression of a number of oncogenes These studies at least in part offer rationales for the cancer protective effects of vitamins
