Resourceallocation Behavior:

Resource-Allocation Behavior Harvey J. Langholtz,Antoinette T. Marty,Christopher T. Ball,Eric C. Nolan,2012-12-06

Despite the increasing necessity for information on allocating dwindling resources resource allocation behavior is not nearly so well understood as choice behavior selection from two or more already defined alternatives events or lotteries Although there have been scores of books devoted to the optimal model for making resource allocation decisions there has never been a book discussing the cognitive aspects of this behavior This book answers the question of how people make such decisions while explaining how Linear Programming can be applied within the context of resource allocation It also takes the reader step by step into several types of problems under varying conditions including harsh and benign environments maximization and minimization multi dimensional and cyclical problems

Railsback, Bret C. Harvey, 2020-05-19 Ecologists now recognize that the dynamics of populations communities and ecosystems are strongly affected by adaptive individual behaviors Yet until now we have lacked effective and flexible methods for modeling such dynamics Traditional ecological models become impractical with the inclusion of behavior and the optimization approaches of behavioral ecology cannot be used when future conditions are unpredictable due to feedbacks from the behavior of other individuals This book provides a comprehensive introduction to state and prediction based theory or SPT a powerful new approach to modeling trade off behaviors in contexts such as individual based population models where feedbacks and variability make optimization impossible Modeling Populations of Adaptive Individuals features a wealth of examples that range from highly simplified behavior models to complex population models in which individuals make adaptive trade off decisions about habitat and activity selection in highly heterogeneous environments Steven Railsback and Bret Harvey explain how SPT builds on key concepts from the state based dynamic modeling theory of behavioral ecology and how it combines explicit predictions of future conditions with approximations of a fitness measure to represent how individuals make good not optimal decisions that they revise as conditions change The resulting models are realistic testable adaptable and invaluable for answering fundamental questions in ecology and forecasting ecological outcomes of real world scenarios Psychology Models of Management Accounting Joan Luft, Michael D.
