Response Models for Detection of Change Anatol Rapoport, W. Stein, G. Burkheimer, 2013-10-03 This book reports our research on detection of change processes that underlie psychophysical learning medical diagnosis military and production control situations and share three major features First the states of the process are not directly observable but become gradually known with the sequential acquisition of fallible information over time Second the mechanism that generates the fallible information is not stationary rather it is subjected to a sudden and irrevocable change Thirdly in complete probabilistic information about the time of change is available when the process commences The purpose of the book is to characterize this class of detection of change processes to derive the optimal policy that minimizes total expected loss and most importantly to develop testable response models based on simple decision rules for describing detection of change behavior The book is theoretical in the sense that it offers mathematical models of multi stage decision behavior and solutions to optimization problems However it is not anti empirical as it aims to stimulate new experimental research and to generate applications Throughout the book questions of experimental verification are briefly considered and existing data from two studies are brought to bear on the validity of the models The work is not complete it only provides a starting point for investigating how people detect a change in an uncertain environment balancing between the cost of delay in detecting the change and the cost of making an incorrect terminal decision Papers in Game Theory J.C. Harsanyi, 2013-03-09 This volume contains twelve of my game theoretical papers published in the period of 1956-80 It complements my *Essays on Ethics Social Behavior and Scientific Explanation* Reidel 1976 and my *Rational Behavior and Bargaining Equilibrium in Games and Social Situations* Cambridge University Press 1977 These twelve papers deal with a wide range of game theoretical problems But there is a common intellectual thread going through all of them they are all parts of an attempt to generalize and combine various game theoretical solution concepts into a unified solution theory yielding one point solutions for both cooperative and noncooperative games and covering even such non classical games as games with incomplete information SECTION A The first three papers deal with bargaining models The first one discusses Nash's two person bargaining solution and shows its equivalence with Zeuthen's bargaining theory The second considers the rationality postulates underlying the Nash-Zeuthen theory and defends it against Schelling's objections The third extends the Shapley value to games without transferable utility and proposes a solution concept that is at the same time a generalization of the Shapley value and of the Nash bargaining solution **Foundations of Utility and Risk Theory with Applications** Bernt P. Stigum, Fred Wenstøp, 2013-03-09 In this volume we present some of the papers that were delivered at FUR 82 the First International Conference on Foundations of Utility and Risk Theory in Oslo June 1982 The purpose of the conference was to provide a forum within which scientists could report on interesting applications of modern decision theory and exchange ideas about controversial issues in the foundations of the theory of choice under uncertainty With that purpose in mind we have

selected a mixture of applied and theoretical papers that we hope will appeal to a wide spectrum of readers from graduate students in social science departments and business schools to people involved in making hardheaded decisions in business and government. In an introductory article Ole Hagen gives an overview of various paradoxes in utility and risk theory and discusses these in the light of scientific methodology. He concludes the article by calling for joint efforts to provide decision makers with workable theories. Kenneth Arrow takes up the same issue on a broad basis in his paper where he discusses the implications of behavior under uncertainty for policy. In the theoretical papers the reader will find attempts at definitive statements of the meaning of old concepts and suggestions for the adoption of new concepts. For instance Maurice Allais discusses four different interpretations of the axioms of probability and explains the need for an empirical characterization of the concept of chance.

Response Models for Detection of Change Anatol Rapoport, W. Stein, G. Burkheimer, 2012-12-06 This book reports our research on detection of change processes that underlie psychophysical learning, medical diagnosis, military and production control situations and share three major features. First, the states of the process are not directly observable but become gradually known with the sequential acquisition of fallible information over time. Second, the mechanism that generates the fallible information is not stationary; rather, it is subjected to a sudden and irrevocable change. Thirdly, in complete probabilistic information about the time of change is available when the process commences. The purpose of the book is to characterize this class of detection of change processes, to derive the optimal policy that minimizes total expected loss, and most importantly, to develop testable response models based on simple decision rules for describing detection of change behavior. The book is theoretical in the sense that it offers mathematical models of multi-stage decision behavior and solutions to optimization problems. However, it is not anti-empirical as it aims to stimulate new experimental research and to generate applications. Throughout the book questions of experimental verification are briefly considered and existing data from two studies are brought to bear on the validity of the models. The work is not complete; it only provides a starting point for investigating how people detect a change in an uncertain environment, balancing between the cost of delay in detecting the change and the cost of making an incorrect terminal decision.

Expected Utility Hypotheses and the Allais Paradox M. Allais, G.M. Hagen, 2013-03-14 Utility theory or value theory in general is certainly the cornerstone of decision theory, game theory, microeconomics, and all social and political theories which deal with public decisions. Recently, the American School of utility, founded by von Neumann and Morgenstern, encountered a far-going criticism by the French School of utility represented by its founder Allais. The whole basis of the theory of decisions involving risk has been shaken and put into question. Consequently, basic research in the fundamentals of utility and value theory evolved into a crisis. Like any crisis in basic research, and this one was not an exception, it was very fruitful. One may simply say Allais versus von Neumann and Morgenstern or the French School of utility

versus the American School became one of the battlefields of scientific development which proved to be a most creative source of new advances and new developments in all those sciences which are based on evaluation of utilities

Recent Developments in the Foundations of Utility and Risk Theory L. Daboni, Aldo M. Montesano, M. Lines, 2012-12-06 The Second International Conference on Foundations of Utility and Risk Theory was held in Venice June 1984 This volume presents some of the papers delivered at FUR 84 The First International Conference FUR 82 was held in Oslo and some of the papers presented on that occasion were published by Reidel in the volume Foundations of Utility and Risk Theory with Applications edited by Bernt P Stigum and Fred Wenst p The theory of choice under uncertainty involves a vast range of controversial issues in many fields like economics philosophy psychology mathematics and statistics The idea of discussing these problems in international conferences has been successful two conferences have been held and others will follow The climate of the debate has changed in the meantime partly as a result of these conferences It is no more only a question of attacking or defending the neo Bernoullian assumptions but also of proposing wider generalizations and including new elements in the analysis of the decision process For instance Amartya Sen comparing the two current notions of rationality internal consistency and self interest pursuit introduces the concept of reasoning and considers the irrationality which may result from the failure of a positive correspondence between reasoning and choice or from a limited capacity of reasoning Rationality is also considered with respect to the controversial axiom of strong independence John C Harsanyi introduces the concept of practical certainty i e

The Foundations of Expected Utility P.C. Fishburn, 2013-03-14 This book offers a unified treatment of my research in the foundations of expected utility theory from around 1965 to 1980 While parts are new the presentation draws heavily on published articles and a few chapters in my 1970 monograph on utility theory The diverse notations and styles of the sources have of course been reconciled here and their topics arranged in a logical sequence The two parts of the book take their respective cues from the von Neumann Morgenstern axiomatization of preferences between risky options and from Savage s foundational treatment of decision making under uncertainty Both parts are studies in the axiomatics of preferences for decision situations and in numerical representations for preferences Proofs of the representation and uniqueness theorems appear at the ends of the chapters so as not to impede the flow of the discussion A few warnings on notation are in order The numbers for theorems cited within a chapter have no prefix if they appear in that chapter but otherwise carry a chapter prefix Theorem 3.2 is Theorem 2 in Chapter 3 All lower case Greek letters refer to numbers in the closed interval from 0 to 1 The same symbol in different chapters has essentially the same meaning with one major exception x y mean quite different things in different chapters I am indebted to many people for their help and encouragement

Concepts and Approaches in Evolutionary Epistemology Franz M. Wuketits, 2012-12-06 The present volume brings together current interdisciplinary research which adds up to an evolutionary theory of human knowledge Le evolutionary epistemology It comprises ten papers dealing with the basic concepts approaches and data in evolutionary

epistemology and discussing some of their most important consequences Because I am convinced that criticism if not confused with mere polemics is apt to stimulate the maturation of a scientific or philosophical theory I invited Reinhard Low to present his critical view of evolutionary epistemology and to indicate some limits of our evolutionary conceptions The main purpose of this book is to meet the urgent need of both science and philosophy for a comprehensive up to date approach to the problem of knowledge going beyond the traditional disciplinary boundaries of scientific and philosophical thought Evolutionary epistemology has emerged as a naturalistic and science oriented view of knowledge taking cognizance of and compatible with results of biological psychological anthropological and linguistic inquiries concerning the structure and development of man s cognitive apparatus Thus evolutionary epistemology serves as a frame work for many contemporary discussions of the age old problem of human knowledge

Dunnette, Harry Charalambos Triandis, 1990 The foremost resource in its field these four volumes contain state of the art thinking on the most significant issues in industrial and organizational psychology by leading scholars and practitioners Volume 1 forms the groundwork for the Handbook covering fundamental areas at both the individual and organizational level Section one examines the major theoretical contributions to the field and the role of theory itself while section two explores research methods and measurement strategies

Philosophy in Geography S. Gale, Gunnar Olsson, 2012-12-06 In any edited volume most credit is due to the individual authors The present case is no exception and we as editors have done little apart from serving as coordinators for a group of friends and colleagues For once the responsibilities are shared We feel that the collection gives a fair representation of the activities at the frontier of human geography in North America Whether these premonitions will be further substantiated is of course to be seen In the meantime we take refuge in Vico s saying that doctrines must take their beginning from that of the matter of which they treat And yet we also know that new treatments never lead to final ends but rather to new doctrines and to new beginnings It is also a pleasure to acknowledge those publishers and authors who have given permission to reprint copyrighted materials Association of American Geographers for Leslie J King s *Alternatives to a Positive Economic Geography* Annals of the Association of American Geographers Vol 66 1976 Edward Arnold Publishers Ltd for Yi Fu Tuan s *Space and Place Humanistic Perspective* in Christopher Board et al eds *Progress in Geography* Vol 6 1974 *Economic Geography* for David Harvey s *Population Resources and the Ideology of Science* *Economic Geography* Vol 50 1974 Institute of British Geographers for David Ley s *Social Geography and the Taken for Granted World* Transactions of the Institute of British Geographers Vol 2 1977 and North Holland Publishing Company for Allen J

Social System Accounts K. Fox, 2012-12-06 This book results from a research program on which I have spent most of my time since 1974 It addresses two of the major problems facing social system accounting how to measure and account for nonmarket activities and how to combine social and economic indicators The solution I propose is accounts based on behavior settings a concept originated by Roger G Barker more than thirty years ago Behavior settings are the natural units

of social activity into which people sort themselves to get on with the business of daily life grocery stores school classes religious services meetings athletic events and so on The descriptive power of behavior settings has been established in surveys of complete communities in the United States and England of high schools ranging in size from fewer than 100 to more than 2000 students of rehabilitation centers in hospitals and of several other types of organizations Behavior settings are empirical facts of everyday life A description of a community or an organization in terms of behavior settings corresponds to common experience In many cases small establishments are behavior settings the paid roles in behavior settings are occupations and the buildings and equipment of establishments are the buildings and equipment of behavior settings

Property and Power Lesz Nowak, 2012-12-06 THE VOICE OF THE PEOPLE THE POLISH ROAD FROM SOCIALISM ON 1 The history of all hitherto existing societies is a history of class struggle not only that between the exploited and the exploiters but also that between the ruled and the rulers And in modern times there is in some societies a struggle between those who are exploited and oppressed at the same time and those who at the same time exploit and oppress 2 The struggle between the owners and the direct producers results from the fact that the former exploit the latter that is they take from their labour more than they give back It is possible since only they the exploiters have a monopoly of the disposal over the means of production and the major part of society must provide them with their labour force Increasing exploitation finally leads to the revolution of the masses and the owners are forced to make concessions in order to avoid re occurrences

Politics as Rational Action L. Lewin, E. Vedung, 2012-12-06 One of the most promising trends in modern political science is the development of a theory of politics as rational action Focussing on choice as the central topic of study rational choice theorists set out to specify what alternative an actor should prefer if he has some given knowledge of the consequences of each alternative and wants to see his preference system as fully realized as possible But rational choice theory is not confined to the normative sphere of science It can also be used for explanatory purposes Then the alternatives actually chosen are specified and the task is to explain the decisions by finding out what considerations lay behind them The starting point for an emerging research program at the Department of Government Uppsala University on Politics as Rational Action is to describe the major choices in fifteen different policy areas of Swedish domestic politics and explain why they were made

Library of Congress Catalogs Library of Congress, 1980 **Essays on Ethics, Social Behaviour, and Scientific Explanation** J.C. Harsanyi, 2012-12-06 When John Harsanyi came to Stanford University as a candidate for the Ph D I asked him why he was bothering since it was most unlikely that he had anything to learn from us He was already a known scholar in addition to some papers in economics the first two papers in this volume had already been published and had dazzled me by their originality and their combination of philosophical insight and technical competence However I am very glad I did not discourage him whether he learned anything worthwhile I don't know but we all learned much from him on the foundations of the theory of games and specifically on the outcome of bargaining The central focus of Harsanyi's work has continued to

be in the theory of games but especially on the foundations and conceptual problems The theory of games properly understood is a very broad approach to social interaction based on individually rational behavior and it connects closely with fundamental methodological and substantive issues in social science and in ethics An indication of the range of Harsanyi's interest in game theory can be found in the first paper of Part B though in fact his own contributions are much broader and in the second paper the applications to the methodology of social science The remaining papers in that section show more specifically the richness of game theory in specific applications
