Reinsurance Regulation:A Contemporary and Comparative Study

Wallace Wang,2003-01-01 We seem to be living at a time when insurance is strained to the breaking point From hurricanes and earthquakes to terrorist attacks and threats of nuclear devastation enormous risks to life and property and accompanying liabilities proliferate on an unprecedented scale Insurer insolvency is not yet common but it is not unusual either And at the root of such failures often lies the compound failure of uncollectable reinsurance This important book proposes that a significant part of the emerging insurance crisis results from inadequate regulation of reinsurance In a detailed and cogent analysis of what an effective regulatory regime for reinsurance must entail the author examines such factors as the following direct supervision of reinsurers versus supervision of reinsurance policies models from developed countries US UK EU and international organisations Organization for Economic Cooperation and Development International Association of Insurance Supervisors the importance of taking legal and economic differences into account while applying models the problem of local protectionism especially in developing countries the dismantling of trade barriers in the reinsurance industry global harmonization of reinsurance regulation the role of reinsurance intermediaries finite risk reinsurance insurance linked securities The author s concluding chapter presents an essential legal infrastructure that allows for efficiency security and individual market characteristics Professor Wang then applies this framework to the Taiwanese insurance market demonstrating convincingly how his proposed regime can solve specific problems while respecting Taiwan s distinct market environment As a meticulously considered appraisal of and solution to a world problem that is growing quickly and uncontrollably Reinsurance Regulation will be of immense value to lawyers professors academics and officials who deal with any facet of economic law

Risk and Securitization in Japan Piers R. Williamson,2013-11-26 Since the early 1990s there has been an emphasis in international relations theory on the shift from a Cold War rationality of threat to a post Cold War rationality of risk However in *Risk and Securitization in Japan 1945 1960* Piers R Williamson argues that this assumption of a shift in rationality stems from a fundamental failure to distinguish between the concepts of threat and risk By clarifying the concepts of threat and risk this book challenges the prevailing hypothesis of a shift from threat to risk with the end of the Cold War and in doing so presents a new explanatory model of risk that can be applied to Japan and elsewhere In turn it proposes that a full comprehension of the concept of risk can generate new understandings of political processes that would otherwise remain obscured Williamson demonstrates how this can be done proffering a new perspective on Japanese security discourse especially the controversy between on the one hand early Japanese governments prime ministers Diet members and those Japanese who drafted the Japanese proposal for the new constitution and on the other hand intellectuals peace movement activists proponents of unarmed neutrality and the US Japan security treaty Including extensive archival material in the form of speeches public statements and government documents this book will be of huge interest to students and scholars of Japanese politics international relations and history alike

Financial and Insurance Formulas Tomas Cipra, 2010-07-16 Financial and insurance calculations become more and more frequent and helpful for many users not only in their profession life but sometimes even in their personal life Therefore a survey of formulas of financial and insurance mathematics that can be applied to such calculations seems to be a suitable aid In some cases one should use instead of the term formula more suitable terms of the type method procedure or algorithm since the corresponding calculations cannot be simply summed up to a single expression and a verbal description without introducing complicated symbols is more appropriate The survey has the following ambitions The formulas should be applicable in practice it has motivated their choice for this survey first and foremost On the other hand it is obvious that by time one puts to use in practice seemingly very abstract formulas of higher mathematics e.g. when pricing financial derivatives evaluating financial risks applying accounting principles based on fair values choosing alternative risk transfers ARL in insurance and the like The formulas should be error free though such a goal is not achievable in full since in the financial and insurance framework one publishes sometimes in a haphazard way various untried formulas and methods that may be incorrect Of course the formulas are introduced here without proofs because their derivation is not the task of this survey
