*Sedimentary Cover of the Craton in Canada* D.F. Stott, J.D. Aitken, 1993 The early chapters of the volume present data and interpretations of the geophysics of the craton and summarise with sequential maps the tectonic evolution of the craton The main body of the text and accompanying plates and figures present the stratigraphy structural history and economic geology of specific sedimentary basins and regions The volume concludes with a summary chapter in which the currently popular theories of cratonal tectonics are discussed and the unresolved questions are identified Sedimentary Cover of the Craton

Catacosinos, 1996-01-01 **The Sedimentary Basins of the United States and Canada** Andrew Miall, 2008-12-03 In recent years there have been rapid strides in our understanding of plate tectonic processes many developments in methods of basin analysis and the accumulation of much new surface and subsurface geological and geophysical data Projects such as COCORP in the United States and Lithoprobe in Canada have provided essential insights into the deep crustal structure of the continent Synthesis of all the available information about North America s geological regions has not been attempted systematically since the Decade of North American Geology project undertaken by the Geological Society of America and the Geological Survey of Canada nearly twenty years ago The book commences with a summary of the Phanerozoic geological history of the United States and Canada illustrated with a suite of new paleogeographic maps and tying in each of the subsequent regional chapters by the inclusion of numerous cross references This followed by a set of fifteen regional syntheses of the principal tectonic regions of the United States and Canada focusing on the stratigraphic and tectonic history of the major sedimentary basins Most of these chapters have been contributed by specialists drawing on their own research and providing interpretive summaries of a type not previously attempted Up to date synthesis of the sedimentary tectonic history of the major areas of the United States and Canada Up to date references Many new color maps Sedimentary Cover—North American Craton: U.S. L.L. Sloss, The sedimentary cover refers to the stratified rocks of youngest Proterozoic and Phanerozoic age that rest upon the largely crystalline basement rocks of the continental interior This volume presents data and interpretations of the geophysics of the craton and summarizes the craton s tectonic evolution It also presents the stratigraphy structural history and economic geology of specific sedimentary basins e g Appalachian basin and regions e g Rocky Mountains It concludes with a discussion of the currently popular theories of cratonal tectonics unresolved questions are identified **Geology of Canada: Sedimentary cover of the craton in Canada**, 1989 **Geological Survey of Canada, Open File 3674**, *Geology of North America—An Overview* Albert W. N. Nadjawong, D. W. Morrow, M. Coniglio, 2000 The purpose of this study is to examine characterize facies changes in the Devonian strata of north eastern British Columbia particularly within the economically important Dunedin Formation and to correlate these rocks with correlative strata in the subsurface to the east Preliminary observations interpretations based on field work are discussed with regard to general stratigraphy sedimentary features and regional facies development of the Dunedin Formation      **Commission Géologique Du Canada** Geological Survey of Canada, 1993
