Introduction The Fourth Symposium on Sediment Water Interactions was held in Melbourne Australia February 16 20th 1987  
The previous three symposia were held in Amsterdam Kingston Ontario and Geneva In keeping with the approach established  
in Geneva contributions addressed sediment water interactions related to both fresh and salt water conditions More than 160  
papers were given in Melbourne including more than 20 poster presentations and collected Abstracts are available from Dr B  
T Hart A total of 51 papers subsequently have been published as proceedings of the Melbourne Symposium 45 of these  
appear in this issue of *Hydrobiologia* A further six appeared earlier as a selection of papers in *J Environ Geol and Water  
Science* 1988 issue 1 these six papers appear in abstract form only in the present publication Although concerned with the  
global environment the International Association for Sediment Water Science attempts to ensure that there is a genuine  
opportunity for participants to focus on regional issues throughout the world and in particular to provide a local forum for  
their presentation The Melbourne meeting was particularly successful in achieving this objective and Australasia was well  
represented by about 36 percent of the contributors About 27 percent were from Europe 17 percent from North America 7  
percent from China and Japan 7 percent from Southeast Asia and India and about 6 percent came from other areas In all 25  
countries were represented      Small-scale Freshwater Toxicity Investigations Christian Blaise,Jean-François  
Férard,2006-01-16 Developed developing and emerging economies worldwide are collectively contributing multiple stresses  
on aquatic ecosystems by the release of numerous contaminants This in turn demands that basic toxicological information on  
their potential to harm living species be available Hence environmental protection programs aimed at preserving water  
quality must have access to comprehensive toxicity screening tools and strategies that can be applied reliably and universally  
While a good number of toxicity testing procedures and hazard assessment approaches have been published in the scientific  
literature over the past decades many are wanting in that insufficient detail is available for users to be able to fully  
understand the test method or scheme and to be able to reproduce it successfully Even standardized techniques published in  
recognized international standard organization documents are often lacking in thoroughness and minutiae Paucity of  
information relating to biological test methods may be consequent and trigger several phenomena including generation of  
invalid data and resulting toxicity measurements erroneous interpretation and decision taking with regards to a particular  
chemical or environmental issue or simply abandonment of testing procedures Clearly improperly documented toxicity  
testing methods can be detrimental to their promotion and use as they open the doorway to unnecessary debate and criticism  
as to their raison d'être Furthermore this situation can indirectly contribute to delaying minimizing or eliminating their

application thereby curtailing the important role toxicity testing plays in the overall protection and conservation of aquatic ecosystems      *Proceedings of The 9th International Conference on Water Resource and Environment* Chih-Huang
