Rifting and Sediments in the Red Sea and Arabian Gulf Regions Najeeb M.A. Rasul, Ian C.F. Stewart, 2024-05-08

Rifting and Sediments in the Red Sea and Arabian Gulf Regions is a unique text that covers a wide range of topics related to the tectonics and geology of the Red Sea and Arabian Persian Gulf region. This book is a collection of invited and peer reviewed chapters contributed by active researchers around the world. The topics covered in this book include tectonics, magmatism and lithology particularly in the Red Sea area. The book also delves into the sediments and evaporites of the Red Sea and Gulf. As the area around the Arabian Peninsula is prone to earthquakes, the seismic hazard estimated in the Red Sea region is also covered by several chapters. Each chapter presents new data and offers extensive lists of references for the reader to explore further. With the ongoing debates regarding the structure of the Red Sea, this book serves as an excellent resource for researchers and any individuals interested in the geology of these two unique seas.

Geller, 2012-12-06 What is the first thing that ordinary people for whom journalists are the proxy ask when they meet a seismologist It is certainly nothing technical like What was the stress drop of the last earthquake in the Imperial Valley It is a simple question which nevertheless summarizes the real demands that society has for seismology This question is Can you predict earthquakes Regrettably notwithstanding the feeling of omnipotence induced by modern technology the answer at present is the very opposite of Yes of course The primary motivation for the question Can you predict earthquakes is practical No other natural phenomenon has the tremendous destructive power of a large earthquake a power which is rivaled only by a large scale war An earthquake in a highly industrialized region is capable of adversely affecting the economy of the whole world for several years But another motivation is cognitive The aim of science is understanding nature and one of the best ways to show that we understand a phenomenon is the ability to make accurate predictions **Seismic Retrofitting:**

Learning from Vernacular Architecture Mariana R. Correia, Paulo B. Lourenco, Humberto Varum, 2015-08-31 Local communities have adapted for centuries to challenging surroundings resulting from unforeseen natural hazards Vernacular architecture often reveals very intelligent responses attuned to the environment Therefore the question that emerged was

how did local populations prepare their dwellings to face frequent earthquakes It was to respond to this gap in knowledge that the SEISMIC V research project was instigated and this interdisciplinary international publication was prepared The research revealed the existence of a local seismic culture in terms of reactive or preventive seismic resistant measures able to survive if properly maintained in areas with frequent earthquakes The fundamental contribution and aims of the publication were to enhance The disciplinary interest in vernacular architecture Its contribution to risk mitigation in responding to natural hazards To encourage academic and scientific research collaboration among different disciplines To contribute to the improvement of vernacular dwellings which half of the world s population still inhabits nowadays Fifty international researchers and experts presented case studies from Latin America the Mediterranean Eastern and Central Asia and the Himalayas region with reference to 20 countries i e Algeria Bolivia Bhutan Chile China Egypt El Salvador Greece Haiti Italy Japan Mexico Morocco Nepal Nicaragua Peru Romania Taiwan Turkey and a closer detailed analysis of Portugal This publication brings together 43 contributions with new perspectives on seismic retrofitting techniques and relevant data addressing vernacular architecture an amazing source of knowledge and to this day home to 4 billion people
