Fabozzi, CFA, 1998-12-15 There are many styles models and factors that go into the management of an equity portfolio The traditional manager s focus on stock picking and the resulting ad hoc nature of portfolio construction can lead to poorly defined portfolios Thus the options between active passive and engineered management come into play with the ultimate objective being to establish an investment structure

that will provide a return over time that compensates for the risk incurred

Security Analysis, Portfolio Management, And Financial Derivatives Cheng Few Lee, Joseph Finnerty, John C Lee, Alice C Lee, Donald Wort, 2012-10-01 Security Analysis Portfolio Management and Financial Derivatives integrates the many topics of modern investment analysis. It provides a balanced presentation of theories, institutions, markets, academic research, and practical applications and presents both basic concepts and advanced principles. Topic coverage is especially broad in analyzing securities; the authors look at stocks and bonds, options, futures, foreign exchange, and international securities. The discussion of financial derivatives includes detailed analyses of options, futures, option pricing models, and hedging strategies. A unique chapter on market indices teaches students the basics of index information calculation and usage and illustrates the important roles that these indices play in model formation, performance evaluation, investment strategy, and hedging techniques. Complete sections on program trading, portfolio insurance, duration, and bond immunization, performance measurements, and the timing of stock selection provide real-world applications of investment theory. In addition, special topics including equity risk premia, simultaneous equation approach for security valuation, and It's calculus are also included for advanced students and researchers.

Portfolio and Investment Analysis with SAS John B. Guerard, Ziwei Wang, Ganlin Xu, 2019-04-03 Choose statistically significant stock selection models using SAS. Portfolio and Investment Analysis with SAS: Financial Modeling Techniques for Optimization is an introduction to using SAS to choose statistically significant stock selection models, create mean-variance efficient portfolios, and aggressively invest to maximize the geometric mean. Based on the pioneering portfolio selection techniques of Harry Markowitz and others, this book shows that maximizing the geometric mean maximizes the utility of final wealth. The authors draw on decades of experience as teachers and practitioners of financial modeling to bridge the gap between theory and application. Using real-world data, the book illustrates the concept of risk-return analysis and explains why intelligent investors prefer stocks over bonds. The authors first explain how to build expected return models based on expected earnings data, valuation ratios, and past stock price performance using PROC ROBUSTREG. They then show how to construct and manage portfolios by combining the expected return and risk models. Finally, readers learn how to perform hypothesis testing using Bayesian methods to add confidence when data mining from large financial databases.
