Frugivory and seed dispersal: ecological and evolutionary aspects T.H. Fleming, Alejandro Estrada, 2012-12-06 Any scientific discipline needs a theoretical framework to guide its development and to sharpen the questions its researchers pursue In biology evolution is the grand theoretical framework and an his torical perspective is necessary to understand present day biological conditions In its formative years the modern study of the fruit frugivore mutualism was guided by the specialist generalist paradigm developed by D Snow D McKey and H Howe Howe reviews the current status of this evolution ary paradigm and points out that it has been dismissed by many workers before being adequately tested This is because ecologists working with the tropical plants and frugivorous birds for which the paradigm was originally developed rarely measure the seed dispersal effectiveness of different disperser species He indicates that this paradigm still has heuristic value and suggests that several additional ecological paradigms including the concept of keystone species of plants and frugivores and the role that frugivores play in density dependent mortality in tropical trees are worth studying The concept of

seed dispersal quality has been central to discussions of fruit frugivore coevolution Schupp thoroughly reviews data bearing on this concept constructs a hierarchical framework for viewing disperser effectiveness and points out that disperser effectiveness depends on both the quantity and quality of seed dispersal Effectiveness in turn affects both evolutionary and ecological relationships between dispersers and their food plants *Annual Report* Ohio State Board of Agriculture,1876
