How to Tame a Fox (and Build a Dog) Lee Alan Dugatkin, Lyudmila Trut, 2019-04-14 Tucked away in Siberia there are furry four legged creatures with wagging tails and floppy ears that are as docile and friendly as any lapdog But despite appearances these are not dogs they are foxes They are the result of the most

astonishing experiment in breeding ever undertaken imagine speeding up thousands of years of evolution into a few decades In 1959 biologists Dmitri Belyaev and Lyudmila Trut set out to do just that by starting with a few dozen silver foxes from fox farms in the USSR and attempting to recreate the evolution of wolves into dogs in real time in order to witness the process of domestication This is the extraordinary untold story of this remarkable undertaking Most accounts of the natural evolution of wolves place it over a span of about 15 000 years but within a decade Belyaev and Trut s fox breeding experiments had resulted in puppy like foxes with floppy ears piebald spots and curly tails Along with these physical changes came genetic and behavioral changes as well The foxes were bred using selection criteria for tameness and with each generation they became increasingly interested in human companionship Trut has been there the whole time and has been the lead scientist on this work since Belyaev s death in 1985 and with Lee Dugatkin biologist and science writer she tells the story of the adventure science politics and love behind it all In *How to Tame a Fox* Dugatkin and Trut take us inside this path breaking experiment in the midst of the brutal winters of Siberia to reveal how scientific history is made and continues to be made today To date fifty six generations of foxes have been domesticated and we continue to learn significant lessons from them about the genetic and behavioral evolution of domesticated animals *How to Tame a Fox* offers an incredible tale of scientists at work while also celebrating the deep attachments that have brought humans and animals together throughout time
