EBOOK: Raising Achievement in Secondary Mathematics Anne Watson, 2006-06-16 This book brings together research and professional knowledge to enhance the teaching of lower attaining students in secondary mathematics Attainment in mathematics is an important social issue since underachievement can make a difference to future life choices particularly amongst certain groups of students Raising Achievement in Secondary Mathematics shows how well meant teaching strategies and approaches can in practice exacerbate underachievement in maths by making inappropriate demands on learners As well as criticizing some of the teaching and grouping practices that are considered normal in many schools the book also offers an alternative view of attainment and capability based on real classroom incidents in which low attaining students show themselves to be able to think about mathematics in quite sophisticated ways The author argues that teaching could be based on learners proficiency rather than on correcting deficits in knowledge and behaviour She describes how a group of teachers who believed that their students

Begg, 2008-01-01 An important contribution that Emerging curriculum makes is a reconceptualizing of the curriculum development process This moves development thinking from the traditional research development dissemination model to one that acknowledges the interrelatedness of many influences on curriculum the multi layered nature of curriculum and the complexity of the educational system in which curriculum exists Indeed the educational system is envisaged as a complex living system The study is autobiographical it is based on a lifetime spent in education during which the author had a particular interest in curriculum and the associated development processes and how one's ideas about these change over time Emerging curriculum has been successfully submitted as a PhD thesis but was written as a book for a wider audience than the traditional thesis one It shows by example how reflection on one's work throughout one's career can be considered as research and can contribute to knowledge in a similar way to that of more traditional doctoral research projects It is hoped that teachers reading this will relate to the author's experiences in schools and will see themselves significant contributors to curriculum that curriculum developers will be provoked into considering alternative ways of working and that academics might move curriculum theorising closer to the reality of schools **The British National Bibliography** Arthur James Wells, 2005 STIMULUS DAN RESPON DALAM PEMBELAJARAN MATEMATIKA Torang Siregar, S.Pd., Gr., M.Pd., 2025-04-15 Buku ini membahas secara mendalam tentang dinamika stimulus dan respons dalam pembelajaran matematika menggabungkan pendekatan teoretis dan praktis untuk meningkatkan efektivitas pengajaran Matematika sering
