reading material      **Understanding the Universe** Richard M. West, 2012-12-06 There is hardly any field of human endeavour which is more fundamental than the study of our surroundings. We have always wanted to learn what was behind our horizon, beyond the next mountain, on the other side of the ocean, on the next planet, at the end of the Universe. We have come a long way since our early ancestors gazed upon the sky in amazement. Giant optical and radio telescopes now allow us to see the early epochs of the Universe, revealing phenomena beyond our comprehension. Spacecrafts with on-board astronomical instrumentation circle the Earth and fly to the limits of the Solar System, providing invaluable new information about nearby and distant objects. Many people have the intuitive feeling that it is easier and better to study the Universe from above the Earth's atmosphere. However, this is only partially true in as much as electromagnetic radiation of certain wavelengths, e.g. X-rays, does not penetrate the atmosphere and can only be studied from balloons and spacecrafts. The advent of space-borne astronomy has not made ground-based observations obsolete; on the contrary, it is only thanks to the combination of the two that we have now a vastly more comprehensive picture of the Universe than just a few decades ago.

Space Research M. J. Rycroft, 2013-10-22 COSPAR Space Research Volume 20 covers the proceedings of the open meetings of the Working Groups on Physical Sciences of the 22nd Plenary Meeting of COSPAR in Bangalore, India, on May 29 to June 9, 1979. This volume is organized into four parts encompassing 50 chapters that review significant advances in space research concerning the Earth's atmosphere and plasma envelope as well as in the planetary science and astronomy fields. Part I describes the unique properties of the different layers of the Earth's neutral atmosphere, including the troposphere, stratosphere, and mesosphere. This part also deals with the measurements of atmospheric radiation, the application of remote sensing by satellites to radiation climatology, the structure and circulation of the stratosphere and mesosphere, and the theory and application of thermospheric models. Part II highlights the research studies concerning the chemistry and energetic charged particle effect in the ionosphere. This part also examines the in situ measurements of the equatorial ionosphere and the distribution of singly ionized helium through backscatter observations. Part III contains surveys associated with some planetary components such as the comets, moon, and Venus. This part specifically discusses the data obtained from different probes, models, and analytical techniques to study these components. Part IV explores research works on the sun, cosmic ray, and infrared and gamma ray astronomy. This book is intended primarily to astronomers and space scientists and researchers.

**Space and Development** Yash Pal, 2013-10-22 Space and Development contains the proceedings of the Vikram Sarabhai Symposium on Space and Development held at Bangalore, India, from May 29 to June 9, 1979. The book provides the papers presented in the symposium, examining the relevance of space technology to the problems being faced by developing countries in the world. The collection of papers, written and prepared by socially committed space scientists, attempts to foster enlightenment on the issue of whether space technology is significant to the solution of the problems besetting mankind, specifically the developing nations. Discussions on topics regarding the applicability and benefit

of space science to countries at all stages of development the role of science and technology in accelerating social and economic progress and geologic and educational applications of space technologies are presented The book also includes a transcript of a panel discussion by the participants of the symposium Space scientists astronomers geologists physicists economists sociologists and people interested to understand the ramifications of space technology on our lives will find this book invaluable Handbook of Geophysics and Space Environments U.S. Air Force Geophysics Laboratory,1985
