Lowland Floodplain Rivers Geomorphological Perspectives:

Lowland Floodplain Rivers P. A. Carling, G. E. Petts, 1992 Geomorphic Approaches to Integrated Floodplain Management of Lowland Fluvial Systems in North America and Europe Paul F. Hudson, Hans Middelkoop, 2015-04-29 This volume provides a comprehensive perspective on geomorphic approaches to management of lowland alluvial rivers in North America and Europe Many lowland rivers have been heavily managed for flood control and navigation for decades or centuries resulting in engineered channels and embanked floodplains with substantially altered sediment loads and geomorphic processes Over the past decade floodplain management of many lowland rivers has taken on new importance because of concerns about the potential for global environmental change to alter floodplain processes necessitating revised management strategies that minimize flood risk while enhancing environmental attributes of floodplains influenced by local embankments and upstream dams Recognition of the failure of old perspectives on river management and the need to enhance environmental sustainability has stimulated a new approach to river management The manner that river restoration and integrated management are implemented however requires a case study approach that takes into account the impact of historic human impacts to the system especially engineering The river basins examined in this volume provide a representative coverage of the drainage of North America and Europe taking into account a range of climatic and physiographic provinces They include the 1 Sacramento California USA 2 San Joaquin California 3 Missouri Missouri USA 4 Red Manitoba Canada and Minnesota USA 5 Mississippi Louisiana USA 6 Kissimmee Florida USA 7 Ebro Spain 8 Rhone France 9 Rhine Netherlands 10 Danube Romania and 11 Volga Russian Federation Rivers The case studies covered in these chapters span a range of fluvial modes of adjustment including sediment channel hydrologic regime floodplains as well as ecosystem and environmental associations Geomorphology and River Management Gary J. Brierley, Kirstie A. Fryirs, 2013-04-29 This book outlines a generic set of procedures termed the River Styles Framework which provides a set of tools for interpreting river character behavior condition and recovery potential Applications of the framework generate a coherent package of geomorphic information providing a physical template for river rehabilitation activities management and restoration of rivers is a rapidly growing topic for environmental scientists geologists and ecologists this book provides a learning tool with which to approach geomorphic applications to river management describes the essential geomorphological principles underlying river behaviour and evolution demonstrates how the River Styles Framework can turn geomorphic theory into practice to develop workable strategies for restoration and management based on real case studies and authors extensive experience applicable to river systems worldwide synthesises fluvial geomorphology ecology and management

Sedimentary Systems Fiona J. Dyer, Martin C. Thoms, Jon M. Olley, 2002 Treatise on Geomorphology, 2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term

Environmental Management of River Basin Ecosystems Mu. Ramkumar,K Kumaraswamy,R. Mohanraj,2015-02-18 This book offers a unique collection of inter and multidisciplinary studies on river systems Rivers have been the prime source of sustenance since the advent of civilization and river systems often form the basis for agriculture transport water and land for domestic commercial and industrial activities fostering economic prosperity A river basin is a basic geographical and climatological unit within which the vagaries of natural processes act and manifest themselves at different spatio temporal scales Even if compared side by side no two river basins respond to natural processes in the same way and thus it has long been recognized that each river basin is unique Hence any developmental activity or conservation effort has to be designed and implemented to match each unique river basin With the burgeoning population and increasing dependency on natural resources understanding and maintaining river systems has become increasingly important This book provides a varied reference work on and unprecedented guidelines for conducting and implementing research on river basins and for managing their ecological development *Farm Land Erosion* S. Wicherek,2012-12-02 During the last twenty years mutations within agricultural systems in France and Europe have brought on a spectacular worsening of soil erosion and degradation This volume contributed to by scientists from 25 countries discusses how this risk can be evaluated and which solutions should be adopted without radically disturbing the socio economic orientation of major agricultural regions It is an excellent starting point for the development of new research themes and will be of great value to soil and environmental scientists and to all those involved in land irrigation and drainage
