The Scientific Case Against Scientific Creationism Jon P. Alston, 2003-09 Sociologist Jon P Alston offers a unique and clear analysis of the weaknesses of scientific creationism and intelligent design by identifying what creationists say when they reject evidence for evolution He demonstrates how scientific creationists accept non scientific statements that contradict established scientific knowledge Acceptance of anti evolutionary knowledge also demands acceptance of a literal six day creation and other statements contradicting scientific findings Few persons have read so closely the writings of scientific creationists to illustrate how anti scientific anti evolutionists become when they criticize the fact of evolution Creationists are forced to develop just so stories to defend their literal interpretations of Biblical scripture Alston finds creationists cannot defend their religious beliefs using established scientific methodologies and principles

God-creature-revelation Jerry D. Korsmeyer, 1995 Educated Western Christians seek to understand the scientific basis of evolution as well as to justify why a God worth worshiping can be responsible yet not indictable for evil The author creates an innovative theological framework that addresses these concerns and provides part of a structure for fundamental theology which is based on the neoclassical metaphysics of Charles Hartshorne and the speculative cosmology of Alfred North Whitehead His model of the divine has three basic principles God is love God is the creator and this creativity is an integral part of divine essence From this model he develops a fundamental theology which focuses on the nature of divinity the interaction between human and the divine and divine revelation He attributes much of his own concept of revelation to Whitehead's model in which revelation is indicative of a successful communion between human and divine This revelation is achieved through symbolic mediation and it is as much inter personal reconciliation as it is a universal resonance of the creative essence between heaven and earth This framework shows initial agreement with Christian traditions it is highly coherent universal in scope and most importantly it has rich potential for future Christian understanding

C.S. Peirce Jaap Brakel, Michael Van Heerden, 1998 This book contains the contributions to an international symposium on Charles Sanders Peirce 1839-1914 Notwithstanding that much of Peirce's philosophical writings still are to be published his contributions to contemporary philosophy can be felt in almost every field The symposium was held at the Institute of Philosophy of the Katholieke Universiteit Leuven in May 1997 Its express aim was to examine Peirce's thought in terms of both its historical integrity and in the application of his thought to current problems The contributions to this book present a comprehensive portrayal of the metaphysical and epistemological strands in the thought of this multifaceted thinker

The Development of the Mediated Mind Joan M. Lucariello, Judith A. Hudson, Robyn Fivush, Patricia J. developing concepts and thought *Quantitative Methods in Biological and Medical Sciences* H.O. Lancaster, 2012-12-06

My original intention was to write a history of medical statistics used in its prewar sense expanding the writings on the subject by Major Greenwood from which I formed many of my ideas in the early days immediately after the Second World War. In later years I decided that the scope of his works was narrower than what I think is appropriate now for he was writing in an era before the acceptance and use of the Fisherian methods and he was probably not aware of the mathematization of many parts of biological theory. Further the boundary between the medical and biological sciences has largely disappeared. Many texts have now been written on branches of the theory and practice inspired by R A Fisher see 4.13. I discuss the history of the use of quantitative methods in the biological sciences defined after the style of Peller 1967 as that branch of science that uses a quantitative approach to or quantitative logical reasoning on or biology. The mathematical tech any issue having to do with medicine niques are various and not classified here. Within the book I use biological sciences to include medicine but use the longer phrase in its title to avoid misunderstandings as to content. Moreover most of the experimental work carried out in medical research laboratories is performed on animals other than man.
