Making Of Social Psychology:

The Making of Modern Social Psychology Serge Moscovici, Ivana Marková, 2006-10-06 This fascinating book makes an important contribution to the history of the social sciences. It tells the largely hidden story of how social psychology became an international social science vividly documenting the micro politics of a virtually forgotten committee the Committee on Transnational Social Psychology whose work took place against the back drop of some of the most momentous events of the twentieth century. Overcoming intellectual, institutional and political obstacles including the Soviet invasion of Czechoslovakia and the military coups in Chile or Argentina the committee struggled to bring social psychology to global recognition not as part of a programme of intellectual imperialism but motivated by a mixture of intellectual philanthropy and self interest. Few authors could tell this unique story. Serge Moscovici is undoubtedly the best placed insider to do so together with Ivana Marková providing a lucid, erudite and carefully documented account of the work of this remarkable group. This book will be an essential resource for any scholar interested in the history of social psychology as well as upper level students studying the history of the social sciences.

The Developmental Psychology of Reasoning and Decision-Making Henry Markovits, 2013-11-26 Logical thinking is a critically important cognitive skill. It is not just essential for mathematical and scientific understanding; it is also of prime importance when trying to navigate our complex and increasingly sophisticated world. Written by world class researchers in the field, *The Developmental Psychology of Reasoning and Decision Making* describes the ways that children learn to reason and how reasoning can be used to overcome the influence of beliefs and intuitions. The chapters in this edited collection focus on the new revolutionary paradigm in reasoning and cover the recent research on the development of reasoning in two important areas: Cognitive abilities required to reason well and how these abilities develop in children and adolescents; Recent empirical data showing the effect intuition and prior belief have on reasoning even when the outcome is inappropriate. Different theoretical and empirical perspectives from recent Piagetian theory, mental models and gist processing are examined along with empirical results looking at specific aspects of reasoning in children. The key theme of the book is to better understand how reasoning develops not only through examining logical reasoning but also the nature of the interactions between people's intuitions and their reasoning abilities. *The Developmental Psychology of Reasoning and Decision Making* provides an overview of the main theories and key empirical results related to the development of reasoning and should be of particular interest to students and researchers in developmental psychology and education along with those in cognitive psychology.
