Controlled Document Authoring in a Machine Translation Age Rei Miyata, 2020-10-29 This book explains the concept framework implementation and evaluation of controlled document authoring in this age of translation technologies Machine translation MT is routinely used in many situations by companies governments and individuals Despite recent advances MT tools are still known to be imperfect sometimes producing critical errors To enhance the performance of MT researchers and language practitioners have developed controlled languages that impose restrictions on the form or length of the source language text However a fundamental persisting problem is that both current MT systems and controlled languages deal only with the sentence as the unit of processing To be effective controlled languages must be contextualised at the document level consequently enabling MT to generate outputs appropriate for their functional context within the target document With a specific focus on Japanese municipal documents this book establishes a framework for controlled document authoring by integrating various research strands including document formalisation controlled language and terminology management It then presents the development and evaluation of an authoring support system MuTUAL that is designed to help non professional writers create well organised documents that are both readable and translatable The book provides useful insights for researchers and practitioners interested in translation technology technical writing and natural language processing applications Chapter 1 the Preface and Bibliography of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Extraction and Analysis of Modal Auxiliaries in Consecutive Clauses from a Corpus Robert Chartrand,2016-02-22 Although there are a large number of grammar books that explain the form and meaning of the English modal auxiliaries there are few resources that provide examples as to what modals could be used and in which cases when referring to successive clauses Modal auxiliaries are among the most difficult structures to teach to students of English as a second or foreign language Some combinations of modals are more commonly used than others and pairs of modals are used to express a specific meaning It is not well known however exactly which combinations of modals are more popular Therefore a method to extract modal auxiliaries in two consecutive clauses from the British National Corpus 2007 XML edition was developed and is discussed in this book Pair modal frequencies were not well known since simple string match methods could not be used with embedded sentences complex sentences and compound sentences This problem was solved by defining rules of sentence structures to identify important clauses carrying the main ideas of sentences extracting only the important clauses and calculating t scores A system was implemented by using computational linguistic techniques for extracting parsing and simplifying sentences for learners to study the use of modal auxiliaries Which collocational expressions are more common What is the appropriateness of the results Learners and educators can make use of these results to gain a better understanding of modal auxiliaries and to facilitate the process of teaching and learning

English Memory-Based Language Processing Walter Daelemans, Antal van den Bosch, 2005-09 Memory based language processing a machine learning and problem solving method for language technology is based on the idea that the direct reuse of examples using analogical reasoning is more suited for solving language processing problems than the application of rules extracted from those examples This book discusses the theory and practice of memory based language processing showing its comparative strengths over alternative methods of language modelling Language is complex with few generalizations many sub regularities and exceptions and the advantage of memory based language processing is that it does not abstract away from this valuable low frequency information Scattered Context Grammars and Their Applications Alexander Meduna, J. Techet, 2010 This computer science book represents scattered information by formal languages and gives an in depth discussion of scattered context grammars as formal means that process these languages It is primarily meant as a monograph on these grammars which represent an important trend of today's formal language theory The text maintains a balance between fundamental concepts theoretical results and applications of these grammars From a theoretical viewpoint it introduces several variants of scattered context grammatical models Based on these models it demonstrates the concepts methods and techniques employed in handling scattered pieces of information with enough rigors to make them quite clear It also explains a close relation between the subject of the book and several important mathematical fields such as algebra and graph theory From a more practical point of view this book describes scattered information processing by fundamental information technologies Throughout this book several in depth case studies and examples are carefully presented Whilst discussing various methods concerning grammatical processing of scattered information the text illustrates their applications with a focus on applications in linguistics **Multiword Units in Machine Translation and Translation Technology** Ruslan Mitkov, Johanna Monti, Gloria Corpas Pastor, Violeta Seretan, 2018-07-15 The correct interpretation of Multiword Units MWUs is crucial to many applications in Natural Language Processing but is a challenging and complex task In recent years the computational treatment of MWUs has received considerable attention but there is much more to be done before we can claim that NLP and Machine Translation MT systems process MWUs successfully This volume provides a general overview of the field with particular reference to Machine Translation and Translation Technology and focuses on languages such as English Basque French Romanian German Dutch and Croatian among others The chapters of the volume illustrate a variety of topics that address this challenge such as the use of rule based approaches compound splitting techniques MWU identification methodologies in multilingual applications and MWU alignment issues **Dialogue in Foreign Language Education** Monika Kusiak, 2009-01-15 Dialogue in foreign language education is a collection of studies that explore topics important in contemporary foreign language education such as academic discourse intercultural communication the use of information technology critical reading the development of communicative skills anxiety in foreign language learning Researchers from Poland and abroad discuss the interplay between various factors influencing foreign

language learning and teaching The publication consists of eleven chapters each followed by comments in which their authors dialogue with the opinions expressed in the chapters It is our hope that the book will inspire readers to ask questions and pursue new paths along old well known topics concerning foreign language education an extremely valuable book discussing issues that play a crucial role in contemporary foreign language pedagogy in an interesting way presenting the voices of its contributors I believe the publication will definitely be welcomed by foreign language teachers pre service and in service trainers academic teachers as well as teacher trainees and students of foreign language colleges translated by the editor Prof zw dr hab Hanna Komorowska Instytut Anglistyki Uniwersytet Warszawski
