## Race Science And Politics:

*Race* Ruth Benedict, Gene Weltfish, 1947      *Race: Science and Politics* Ruth Benedict, 1940      *Race* Ruth Benedict, Margaret Mead, 2019-10-15

In science race can be a useful concept for specific limited purposes. When race as a way of classifying people is drafted into the service of politics, religion, or any belief system, then danger follows. That is the focus of this classic repudiation of racism, which is as readable and timely now as when it first appeared. *Race: Science and Politics* was first published in 1940 in response to the global rise of fascism and its pseudoscientific rationales for marginalizing and even exterminating inferior people. Writing for a general audience, Ruth Benedict ranges across the history of Western thought and research on race to illuminate rifts between the facts of race and the claims of racism. Rather than take issue only with the Nazis and their allies, Benedict set out to show that all racist beliefs are objectively groundless and that is the key to the book's ongoing relevance. The book's bonus content includes *The Races of Mankind*, a pamphlet-length distillation of the book with its own controversial role in dismantling racist theory. This edition also includes a new foreword by Judith Schachter. An anthropologist, historian, and Benedict biographer, Schachter discusses the book's importance for current readers. Also included is a foreword by anthropologist Margaret Mead from 1958, a time when colonial ties around the world were unravelling and civil rights unrest was a daily occurrence in the United States.

**The Science and Politics of Racial Research** William H. Tucker, 1994. Unlike other critiques of the scientific literature on racial difference, *The Science and Politics of Racial Research* argues that there has been no scientific purpose or value to the study of innate differences in ability between groups. William Tucker shows how for more than a century, scientific investigations of supposedly innate differences in ability between races have been used to rationalize social and political inequality as the unavoidable consequence of natural differences. Tucker structures his work chronologically, with each chapter describing how research on genetic difference was used in a particular era to support a particular political agenda. He begins with the use of science to support slavery in the mid-nineteenth century and ends with the effects of Jensenism in the 1970s. Highlights include one chapter describing a little-known but concerted attempt by a group of scientists to overturn the *Brown v. Board of Education* decision on the basis of expert testimony about racial differences, and another that presents a review of the eugenics movement in the twentieth century. The author also considers how to balance the rights and responsibilities of scientists, concluding that one generally neglected method is to strengthen the rights of research subjects.

[Race and the Making of American Political Science](#) Jessica Blatt, 2018-05. *Race and the Making of American Political Science* shows that racial thought was central to the academic study of politics in the United States at its origins, shaping the discipline's core categories and questions in fundamental and lasting ways.

[Race and the Making of American Political Science](#) Jessica Blatt, 2018-03-13. *Race and the Making of American Political Science* shows that changing scientific ideas about racial difference were central to the academic study of politics as it emerged in the United States. From the late nineteenth century

through the 1930s scholars of politics defined and continually reoriented their field in response to the political imperatives of the racial order at home and abroad as well to as the vagaries of race science The Gilded Age scholars who founded the first university departments and journals located sovereignty and legitimacy in a Teutonic germ of liberty planted in the new world by Anglo Saxon settlers and almost extinguished in the conflict over slavery Within a generation Teutonism would come to seem like philosophical speculation but well into the twentieth century major political scientists understood racial difference to be a fundamental shaper of political life They wove popular and scientific ideas about race into their accounts of political belonging of progress and change of proper hierarchy and of democracy and its warrants And they attended closely to new developments in race science viewing them as central to their own core questions In doing so they constructed models of human difference and political life that still exert a powerful hold on our political imagination today in and outside of the academy By tracing this history Jessica Blatt effects a bold reinterpretation of the origins of U S political science one that embeds that history in larger processes of the coproduction of racial ideas racial oppression and political knowledge

Race, Racism, and Science John P. Jackson, Nadine M. Weidman, 2006 Since the eighteenth century when natural historians created the idea of distinct racial categories scientific findings on race have been a double edged sword For some antiracists science holds the promise of one day providing indisputable evidence to help eradicate racism On the other hand science has been enlisted to promote racist beliefs ranging from a justification of slavery in the eighteenth century to the infamous twentieth century book *The Bell Curve* whose authors argued that racial differences in intelligence resulted in lower test scores for African Americans This well organized readable textbook takes the reader through a chronological account of how and why racial categories were created and how the study of race evolved in multiple academic disciplines including genetics psychology sociology and anthropology In a bibliographic essay at the conclusion of each of the book's seven sections the authors recommend primary texts that will further the reader's understanding of each topic Heavily illustrated and enlivened with sidebar biographies this text is ideal for classroom use

*The Remnants of Race Science* Sebastián Gil-Riaño, 2023-08-29 After World War II UNESCO launched an ambitious international campaign against race prejudice Casting racism as a problem of ignorance it sought to reduce prejudice by spreading the latest scientific knowledge about human diversity to instill mutual understanding between groups of people This campaign has often been understood as a response led by British and U S scientists to the extreme ideas that informed Nazi Germany Yet many of its key figures were social scientists either raised in or closely involved with South America and the South Pacific *The Remnants of Race Science* traces the influence of ideas from the Global South on UNESCO's race campaign illuminating its relationship to notions of modernization and economic development Sebastián Gil-Riaño examines the campaign participants involvement in some of the most ambitious development projects of the postwar period In challenging race prejudice these experts drew on ideas about race that emphasized plasticity and mutability in contrast to the fixed categories of scientific racism Gil-Riaño

argues that these same ideas legitimated projects of economic development and social integration aimed at bringing ostensibly backward indigenous and non European peoples into the modern world He also shows how these experts promotion of studies of race relations inadvertently spurred a deeper reckoning with the structural and imperial sources of racism as well as the aftermath of the transatlantic slave trade Shedding new light on the postwar refashioning of ideas about race this book reveals how internationalist efforts to dismantle racism paved the way for postcolonial modernization projects

**Constructing Race** Tracy Teslow,2014-07-21 Constructing Race helps unravel the complicated and intertwined history of race and science in America Tracy Teslow explores how physical anthropologists in the twentieth century struggled to understand the complexity of human physical and cultural variation and how their theories were disseminated to the public through art museum exhibitions books and pamphlets In their attempts to explain the history and nature of human peoples anthropologists persistently saw both race and culture as critical components This is at odds with a broadly accepted account that suggests racial science was fully rejected by scientists and the public following World War II This book offers a corrective showing that both race and culture informed how anthropologists and the public understood human variation from 1900 through the decades following the war The book offers new insights into the work of Franz Boas Ruth Benedict and Ashley Montagu as well as less well known figures including Harry Shapiro Gene Weltfish and Henry Field

An American Health Dilemma: Race, medicine, and health care in the United States 1900-2000 W. Michael Byrd,Linda A. Clayton,2000 This volume is a comprehensive collection of critical essays on The Taming of the Shrew and includes extensive discussions of the play s various printed versions and its theatrical productions Aspinall has included only those essays that offer the most influential and controversial arguments surrounding the play The issues discussed include gender authority female autonomy and unruliness courtship and marriage language and speech and performance and theatricality

**Boasians at War** Anthony Q. Hazard, Jr.,2020-04-20 This volume seeks to recover a specific historical moment within the tradition of anthropologists trained in the United States under Franz Boas arguably the father of modern American anthropology Focusing on Boasians Ashley Montagu Margaret Mead Melville Herskovits and Ruth Benedict Anthony Hazard highlights the extent to which the Boasians offer historicized explanations of racism that move beyond a quest to reshape only the discipline Boasian war work pointed to the histories of chattel slavery and colonialism to theorize not just race but the emergence of racism as both systemic and interpersonal The realities of race that continue to plague the United States have direct ties to the anthropological work of the figures examined here particularly within the context of the 20th century black freedom struggle Ultimately Boasians at War offers a detailed glimpse of the long troubled history of the concept of race along with the real life realities of racism that have carried on despite the harnessing of scientific knowledge to combat both
