Realm Of The Long Eyes A Brief History:

American Artists Engage the Built Environment, 1960-1979 Susanneh Bieber, 2023-07-31 This volume reframes the development of US American avant garde art of the long 1960s from minimal and pop art to land art conceptual art site specific practices and feminist art in the context of contemporary architectural discourses Susanneh Bieber analyzes the work of seven major artists Donald Judd Robert Grosvenor Claes Oldenburg Robert Smithson Lawrence Weiner Gordon Matta Clark and Mary Miss who were closely associated with the formal aesthetic innovations of the period While these individual artists came to represent diverse movements Bieber argues that all of them were attracted to the field of architecture the work of architects engineers preservationists landscape designers and urban planners because they believed these practices more directly shaped the social and material spaces of everyday life This book's contribution to the field of art history is thus twofold First it shows that the avant garde of the long 1960s did not simply develop according to an internal logic of art but also as part of broader sociocultural discourses about buildings and cities Second it exemplifies a methodological synthesis between social art history and poststructural formalism that is foundational to understanding the role of art in the construction of a more just and egalitarian society The book will be of interest to scholars working in art history architecture urbanism and environmental humanism

Zech, 2013-11-11 **Observatories of the Southwest** Douglas Isbell, Stephen E. Strom, 2016-12-15 With its clear skies and low humidity the southwestern United States is an astronomer's paradise where observatories like Kitt Peak have redefined the art of skywatching The region is unique in its loose federation of like minded research outposts and in the quantity and diversity of its observatories places captured in this unique guidebook Douglas Isbell and Stephen Strom both intimately involved in southwestern astronomy have written a practical guide to the major observatories of the region for those eager to learn what modern telescopes are doing to understand the role each of these often quirky places has played in advancing our understanding of the cosmos and hopefully to visit and see the tools of the astronomer up close For each observatory the authors describe its history highlights of its contributions to astronomy with an emphasis on recent results and information for visitors Also included are wide ranging interviews with astronomers closely associated with each site Observatories covered range from McDonald in Texas to Palomar in California with significant outposts in between Arizona's Kitt Peak National Observatory southwest of Tucson the Lowell Observatory in Flagstaff and the Whipple Observatory outside Amado and New Mexico's Very Large Array near Socorro and Sacramento Peak close to Sunspot In addition to describing these established institutions they also take a look ahead to the most powerful ground based telescope in the world just beginning

to operate at full power on Mount Graham in Safford Arizona With more than three dozen illustrations Observatories of the Southwest is accessible to amateur astronomers tourists students and teachers anyone fascinated with the contributions that astronomy has made to deepening our understanding of humanity s place in the universe whether exploring the solar system from Lowell Observatory or studying the birth of stars using the army of giant radio telescopes at the Very Large Array This book aims to inspire visits to these sites by illuminating the major scientific questions being pursued every clear night beneath the dark skies of the Southwest and the amazing machinery that makes these pursuits possible *Organizations and Strategies in Astronomy* 6 Andre Heck,2006-10-14 When I was a child growing up in South America I often went camping in the wild and hence had direct access to the wondrous Southern sky the Southern Cross was all mine at the time Little did I know then that the study of the sky would take such a huge importance in my life and that in the end astronomy and astrophysics would in many ways become my country and my religion I have lived in several different countries and when asked my nationality I am always very tempted to reply astronomer I started as a theorist and my only dream in my youth was to spend nights thinking and calculating with paper and pencil and to have the impression by dawn that I had understood something new So at the time astronomy was seen or dreamt by me as a solitary endeavour with periodic encounters with my wise adviser and professors it is this model that I adopted when doing my PhD work My generation has lived through many revolutions of all kinds Those in astronomy I believe remain particularly remarkable and I am a true product of them Now I elect to live and work in large organizations and to share my endeavours with many people And I relish the series of Andre Heck on Organizations and Strategies in Astronomy which help us recover our memories reconstitute our own story and read with glee about our neighbouring or far away colleagues *Southern Stars* ,1984
