## Receiving Systems Design:

Receiving Systems Design Stephen J. Erst, 1984      *Electronic Warfare Receivers and Receiving Systems* Richard A. Poisel, 2015-06-01 Receivers systems are considered the core of electronic warfare EW intercept systems Without them the fundamental purpose of such systems is null and void This book considers the major elements that make up receiver systems and the receivers that go in them This resource provides system design engineers with techniques for design and development of EW receivers for modern modulations spread spectrum in addition to receivers for older common modulation formats Each major module in these receivers is considered in detail Design information is included as well as performance tradeoffs of various components Major factors that influence the functioning of the modules are identified and discussed Key performance parameters are identified as well and approaches to achieving design goals are considered      *Basic Radar Analysis, Second Edition* Mervin C. Budge, Shawn R. German , 2020-04-30 This highly anticipated second edition of an Artech House classic covers several key radar analysis areas the radar range equation detection theory ambiguity functions waveforms antennas active arrays receivers and signal processors CFAR and chaff analysis Readers will be able to predict the detection performance of a radar system using the radar range equation its various parameters matched filter theory and Swerling target models The performance of various signal processors single pulse pulsed Doppler LFM NLFM and BPSK are discussed taking into account factors including MTI processing integration gain weighting loss and straddling loss The details of radar analysis are covered from a mathematical perspective with in depth breakdowns of radar performance in the presence of clutter Readers will be able to determine the noise temperature of a multi channel receiver as it is used in active arrays With the addition of three new chapters on moving target detectors inverse synthetic aperture radar ISAR and constant false alarm rate CFAR and new MATLAB codes this expanded second edition will appeal to the novice as well as the experienced practitioner      Modern Communications Jamming Principles and Techniques Richard Poisel, 2011 This edition features a wealth of new material on urban warfare including a computer simulation of EW architecture alternatives for land based forces based on urban constraints It also includes an expanded section on time hopped spread spectrum communications more details on modern communication system technologies such as CDMA and OFDM and an in depth discussion on sources of urban noise This practical resource is focused on showing the reader how to design and build jammers specifically targeted at spread spectrum anti jam communications Moreover it gives assistance in evaluating the expected performance of jamming systems against modern communications systems and discover the best waveform to use to counter communication systems designed to be effective in jamming environments While mathematical derivations in general are avoided the book presents error rate performance equations for most modern digital anti jam communication systems      **Western Aviation, Missiles, and Space** , 1963      **Ebony** , 1969-11 EBONY is the flagship magazine of Johnson Publishing Founded in 1945 by John H Johnson it still maintains the highest global circulation of any African American
